

Um pouco de história

Dispositivos de visualização

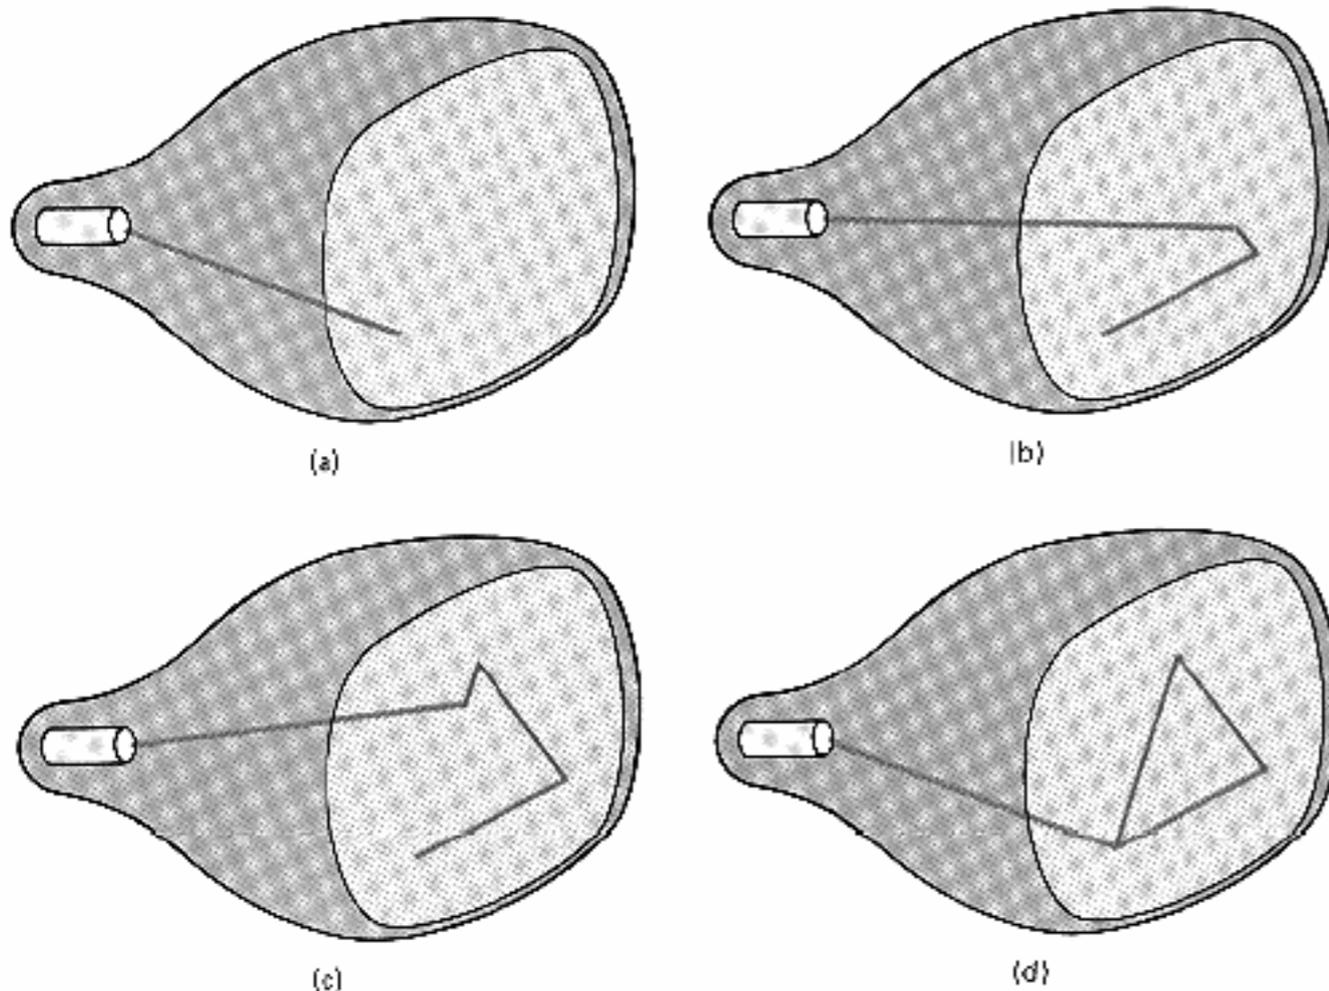

O(s) feixe(s) de electrões funciona(m) como caneta, com o deslocamento controlado pelas placas defletoras (*steering magnets*).

O ligar e desligar do(s) feixe(s) “fazem a caneta tocar ou afastar-se do papel.”

Dispositivos de visualização

Dispositivo Vetorial

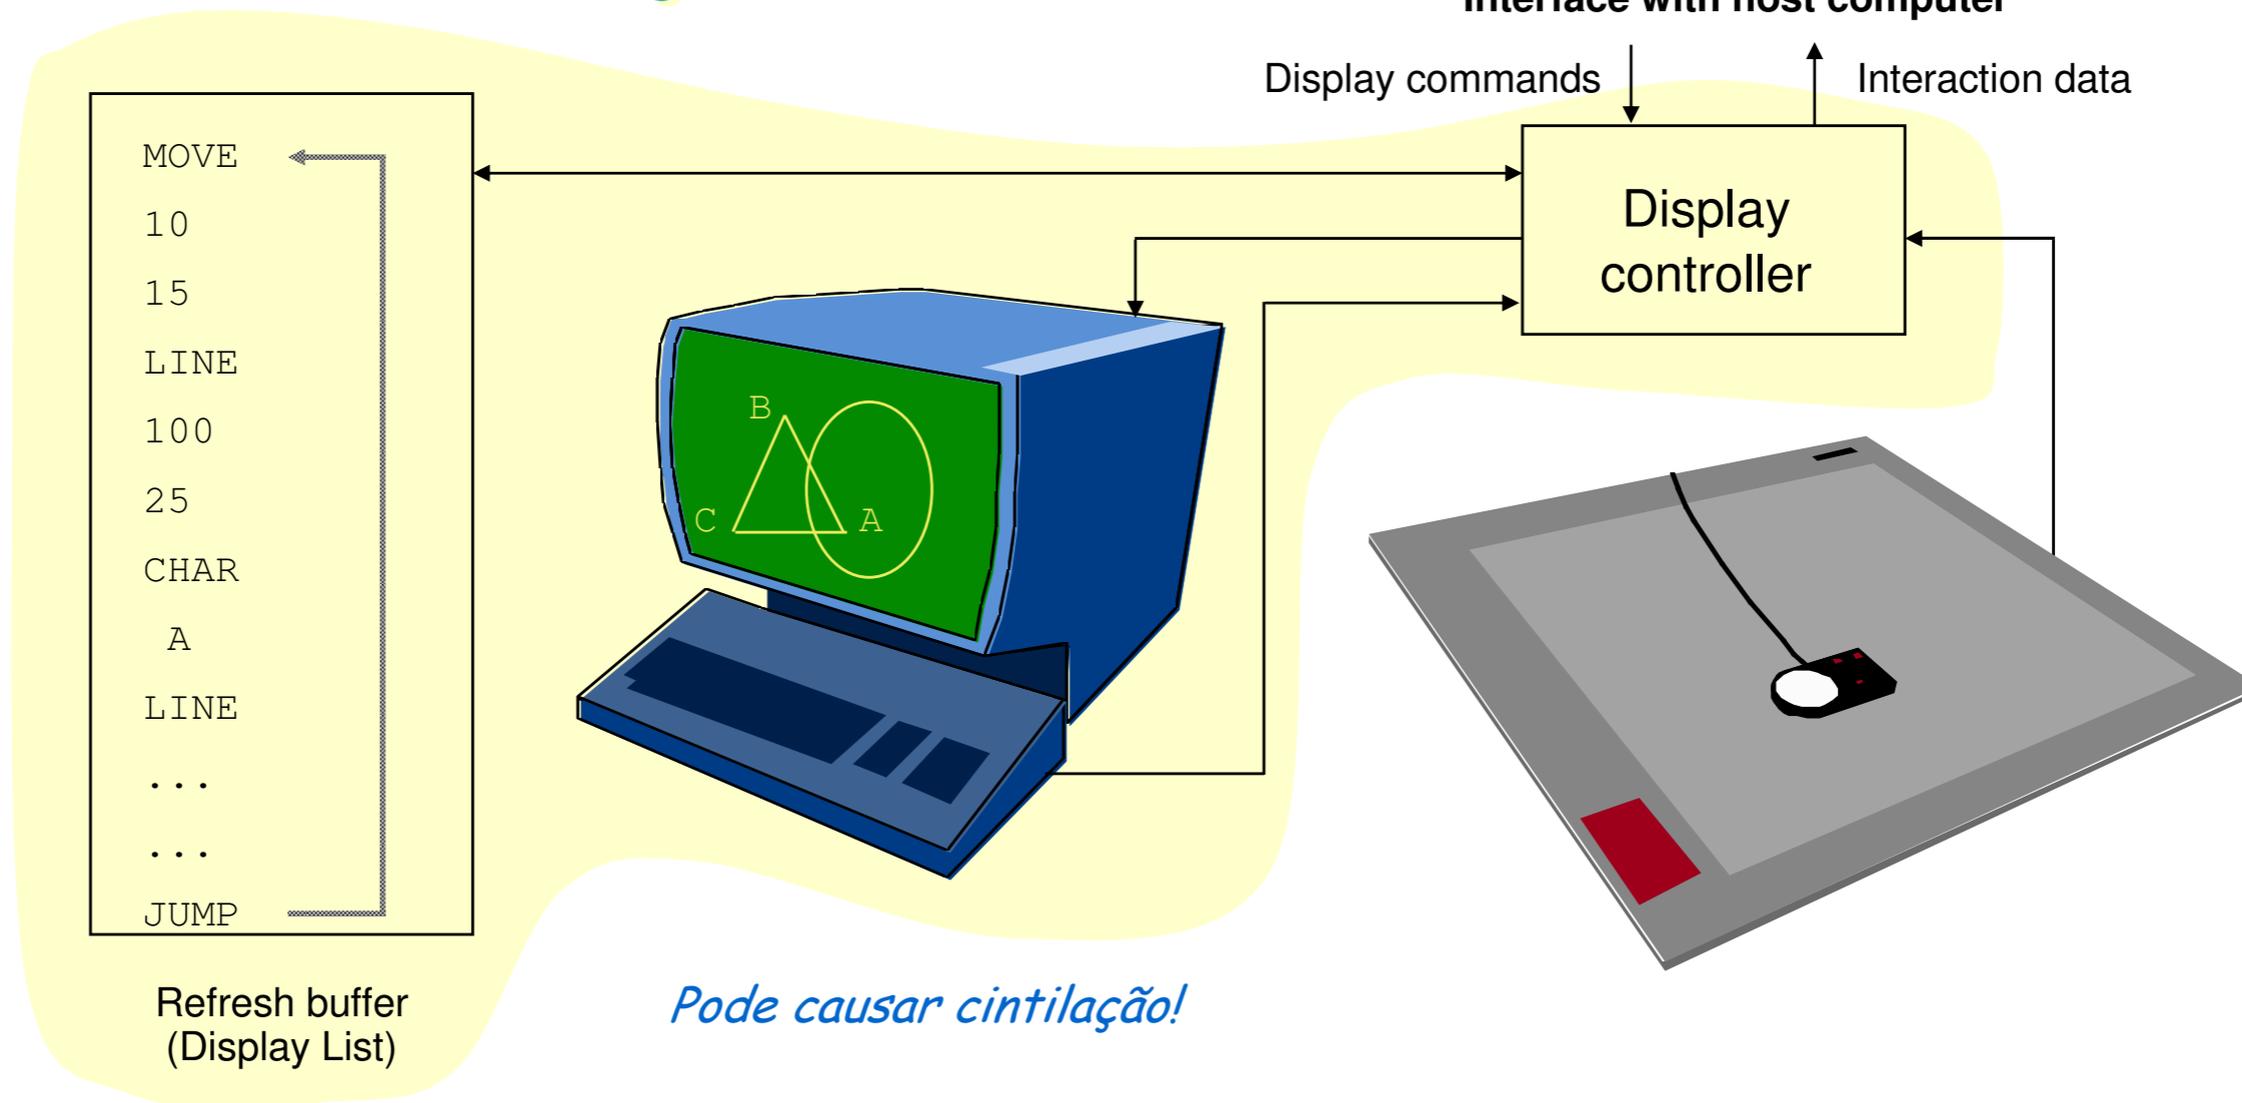

osciloscópio (modo X/Y)

A baixa persistência do fósforo ($10\text{-}60\mu\text{s}$) obriga ao refrescamento do ecrã (30Hz ou mais), sendo continuamente redesenhados os gráficos no ecrã

Dispositivos de visualização

Terminal gráfico nos anos 60

Refresh Vector Display Device
(Terminal vetorial ou caligráfico c/ refrescamento)

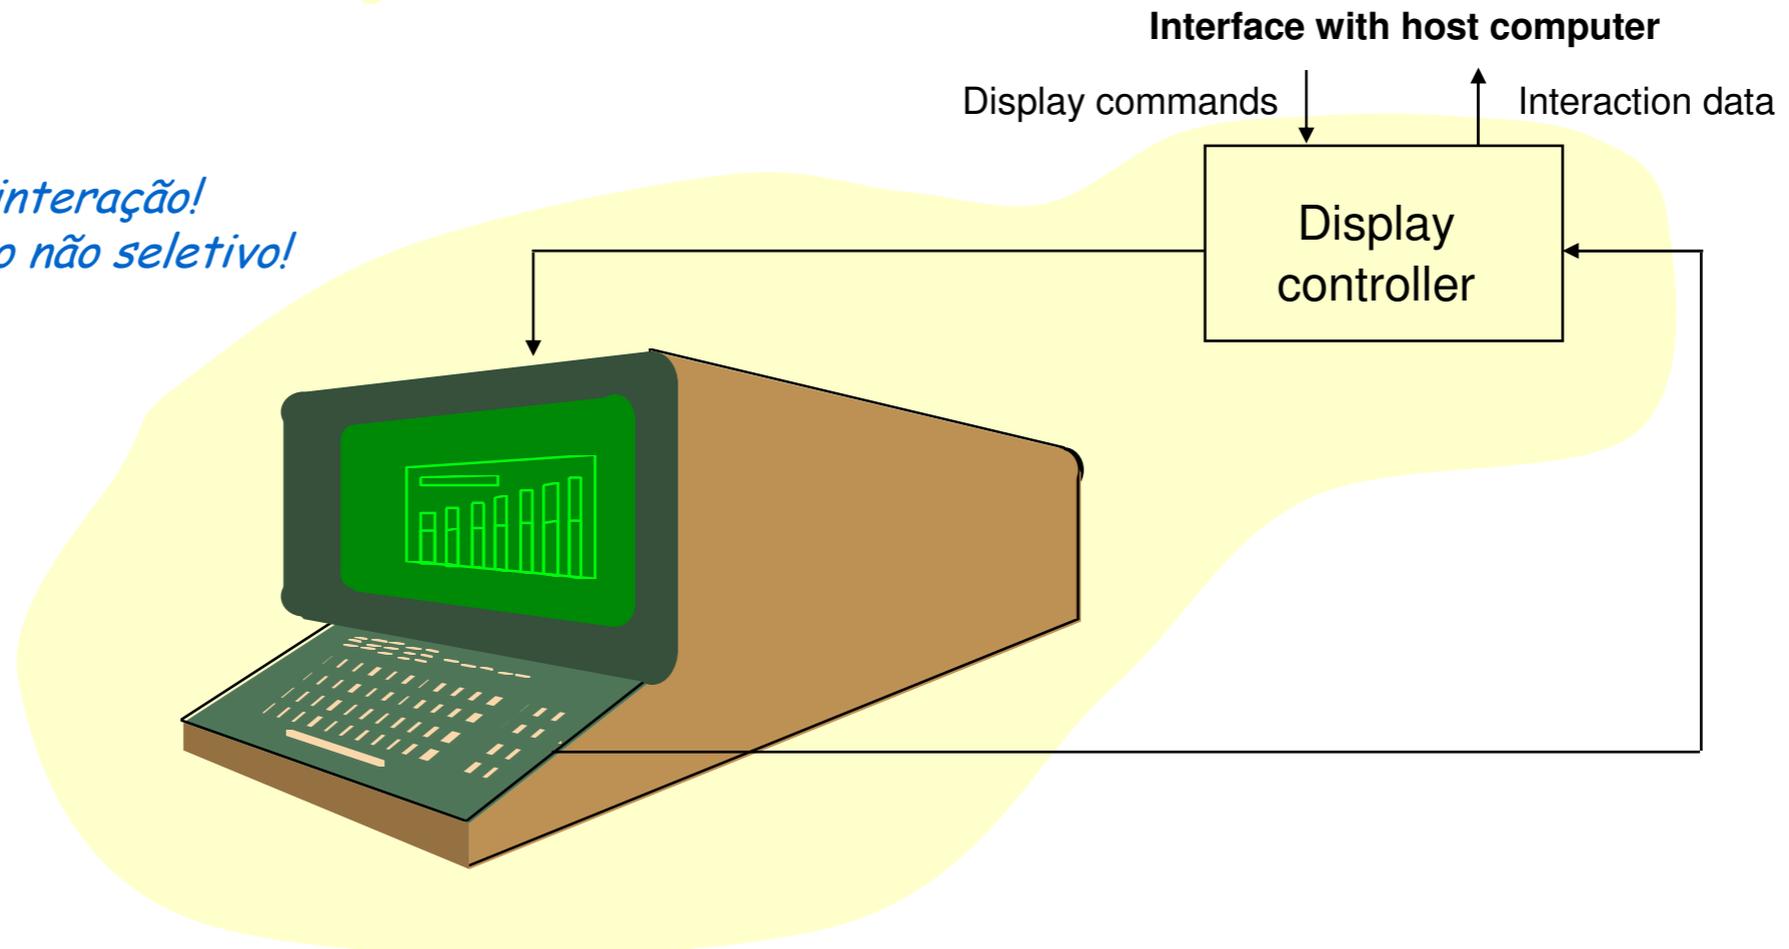

Refresh display ≈ USD 80 000
+
dedicated host computer ≈ USD 400 000

M.Próspero

Dispositivos de visualização

Terminal gráfico nos anos 70

*Difícil interação!
Apagamento não seletivo!*

Direct-View Storage Tube Device — DVST

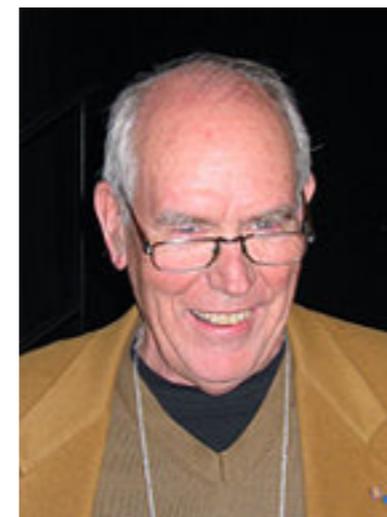

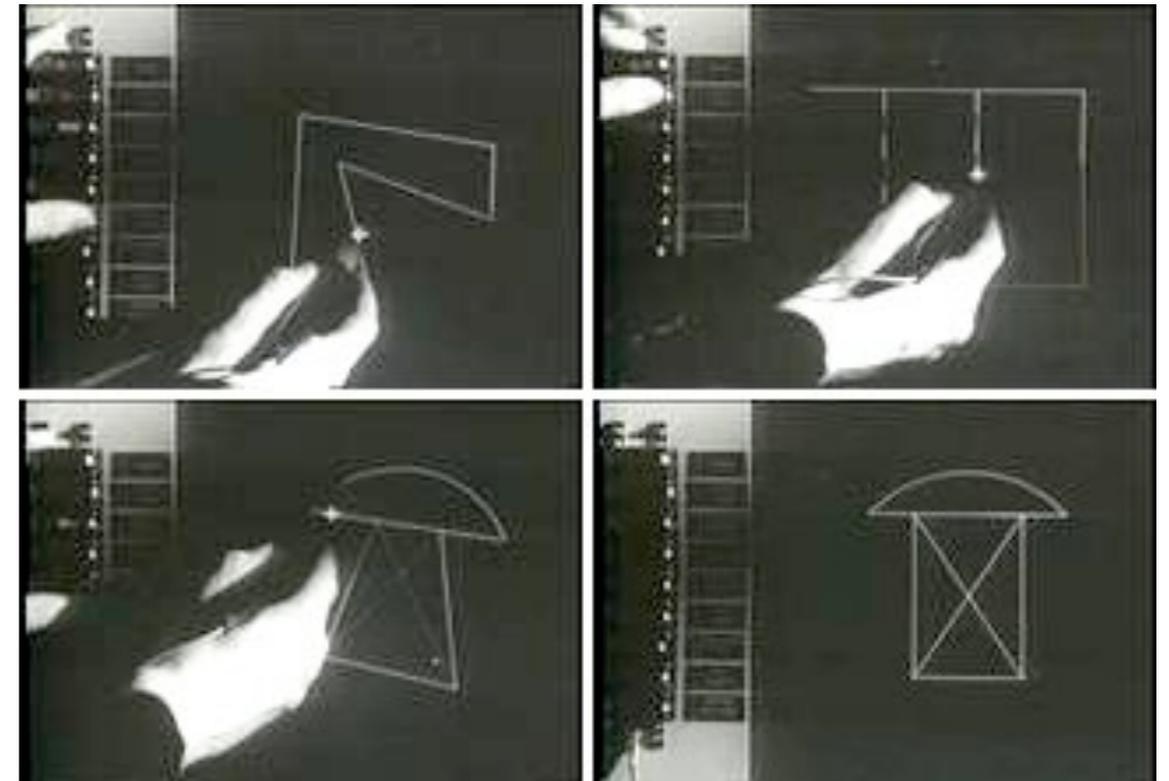

(Terminal vetorial ou caligráfico s/ refrescamento)

DVST ≈ USD 4 000
+
timesharing system

M.Próspero

Sketchpad (1963)

- Computer program written in 1963 for his PhD (@MIT).
- Human-Computer Interaction landmark
- Ancestor of modern Computer-Aided Design
- Ancestor of the famous Graphical User Interface (GUI)
- Object Oriented Programming principles (master, instances)
- Constraints during drawing
- hardware: lightpen, XY-plotter, 1st interactive computer (bath oriented model adapted)

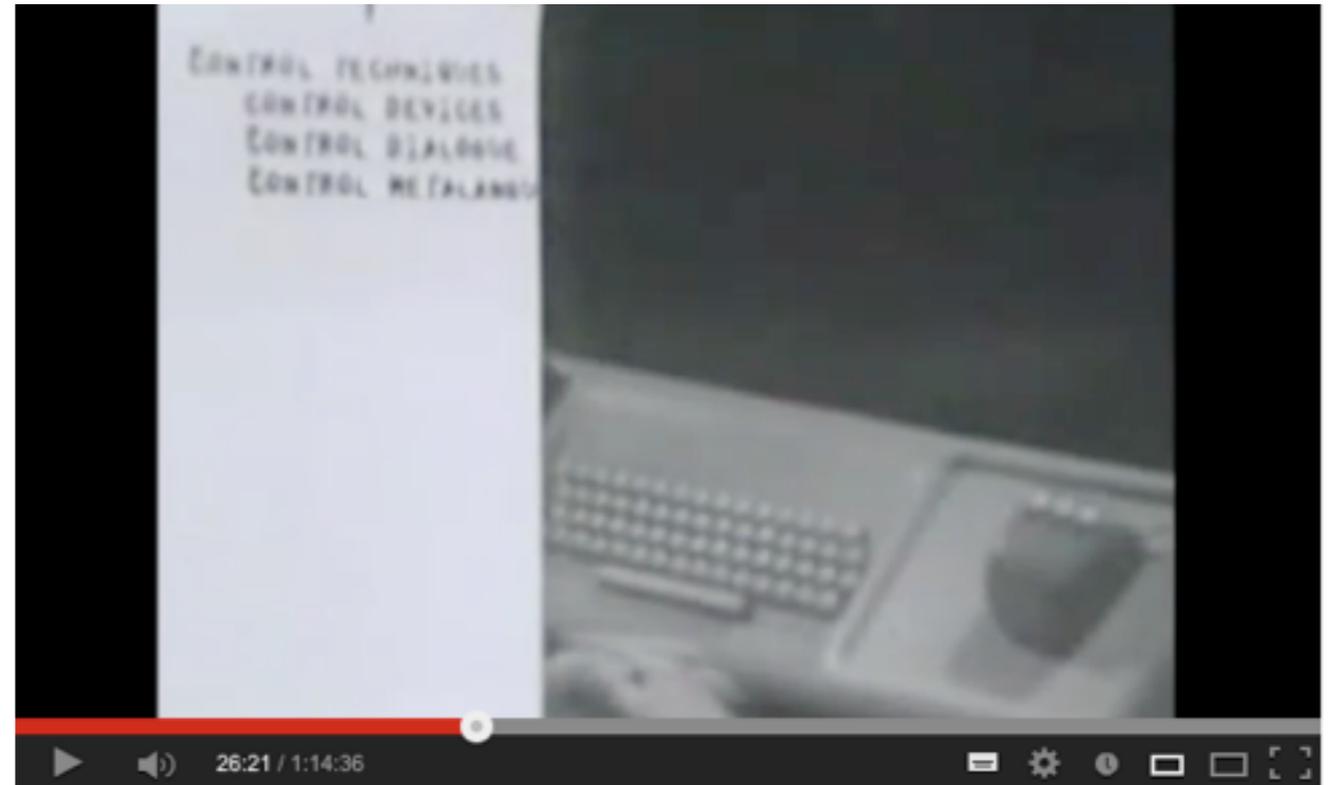

Ivan Sutherland

*1988 Turing Award

NLS - oN-Line System (1968)

- Revolutionary computer cooperation system
- computer collaborative work
- appearance of the first mouse
- Journal (hypertext collaborative document creation)
- Interactive visualization
- teleconferência
- Email, CSCW
- ...

mother of all demos

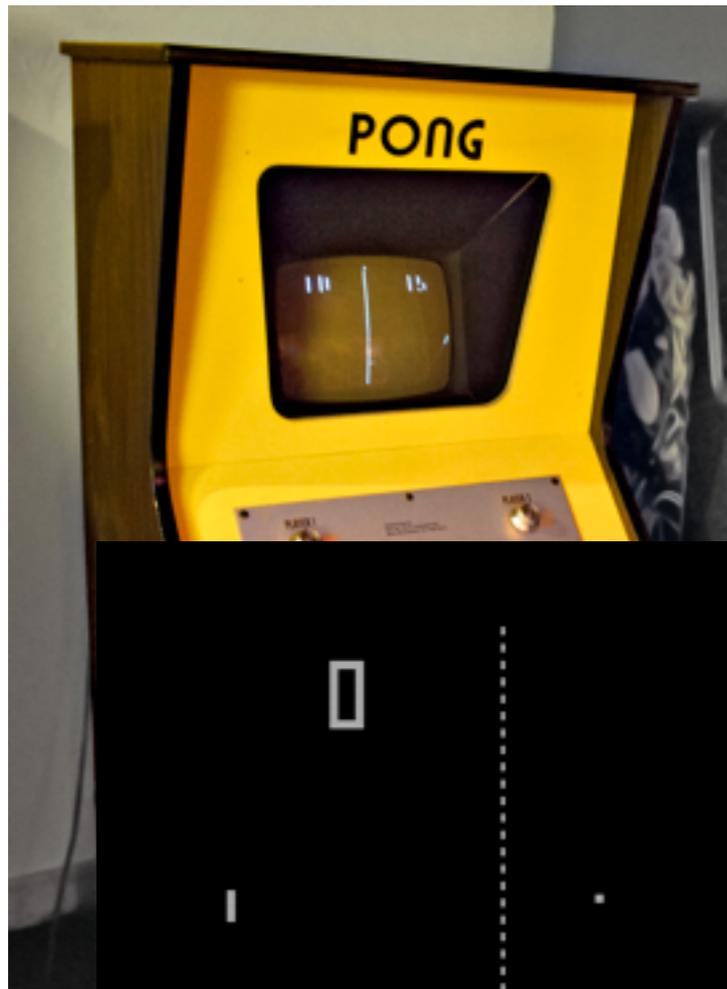

<http://www.youtube.com/watch?v=QBfTfrWcgy8>

Douglas Engelbart
and the first mouse

*1997 Turing Award

First Vector Video Games (1970s)

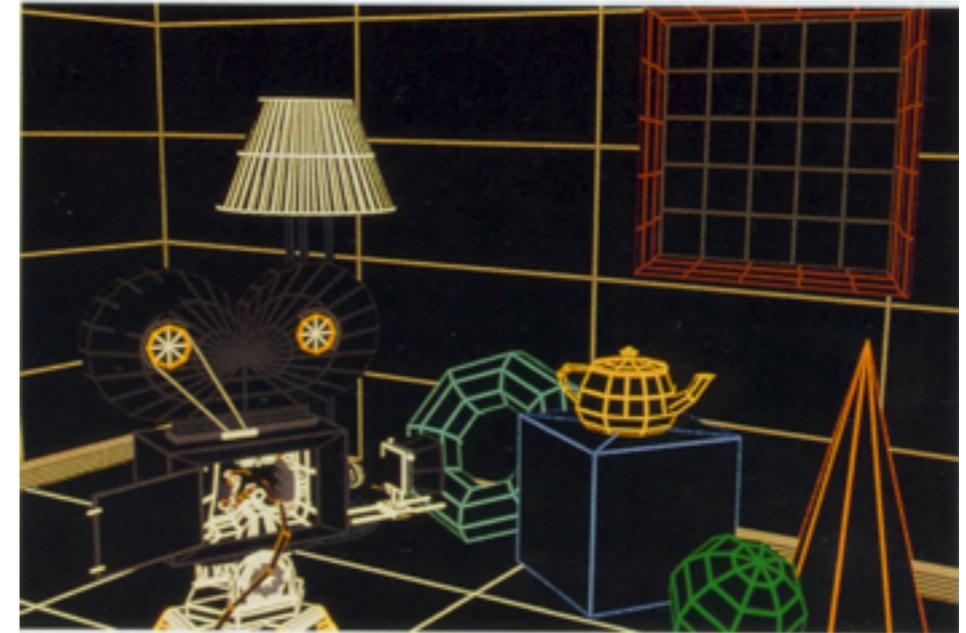

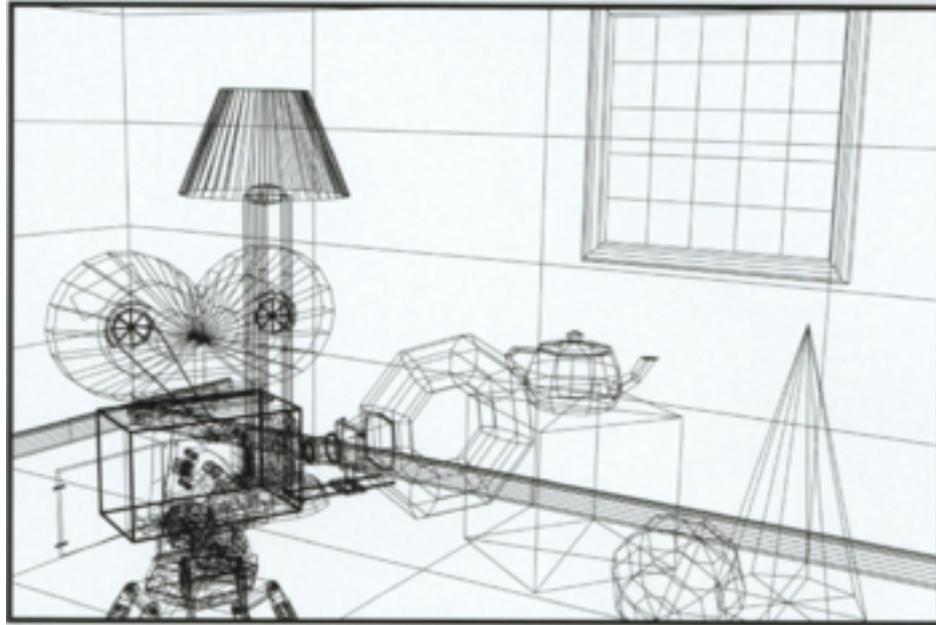

Pong

Asteroids

Desafios: 1960's (visibilidade)

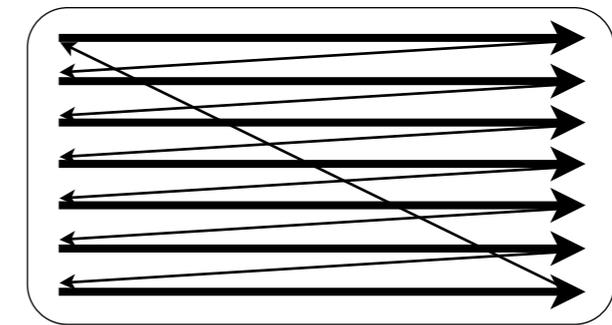

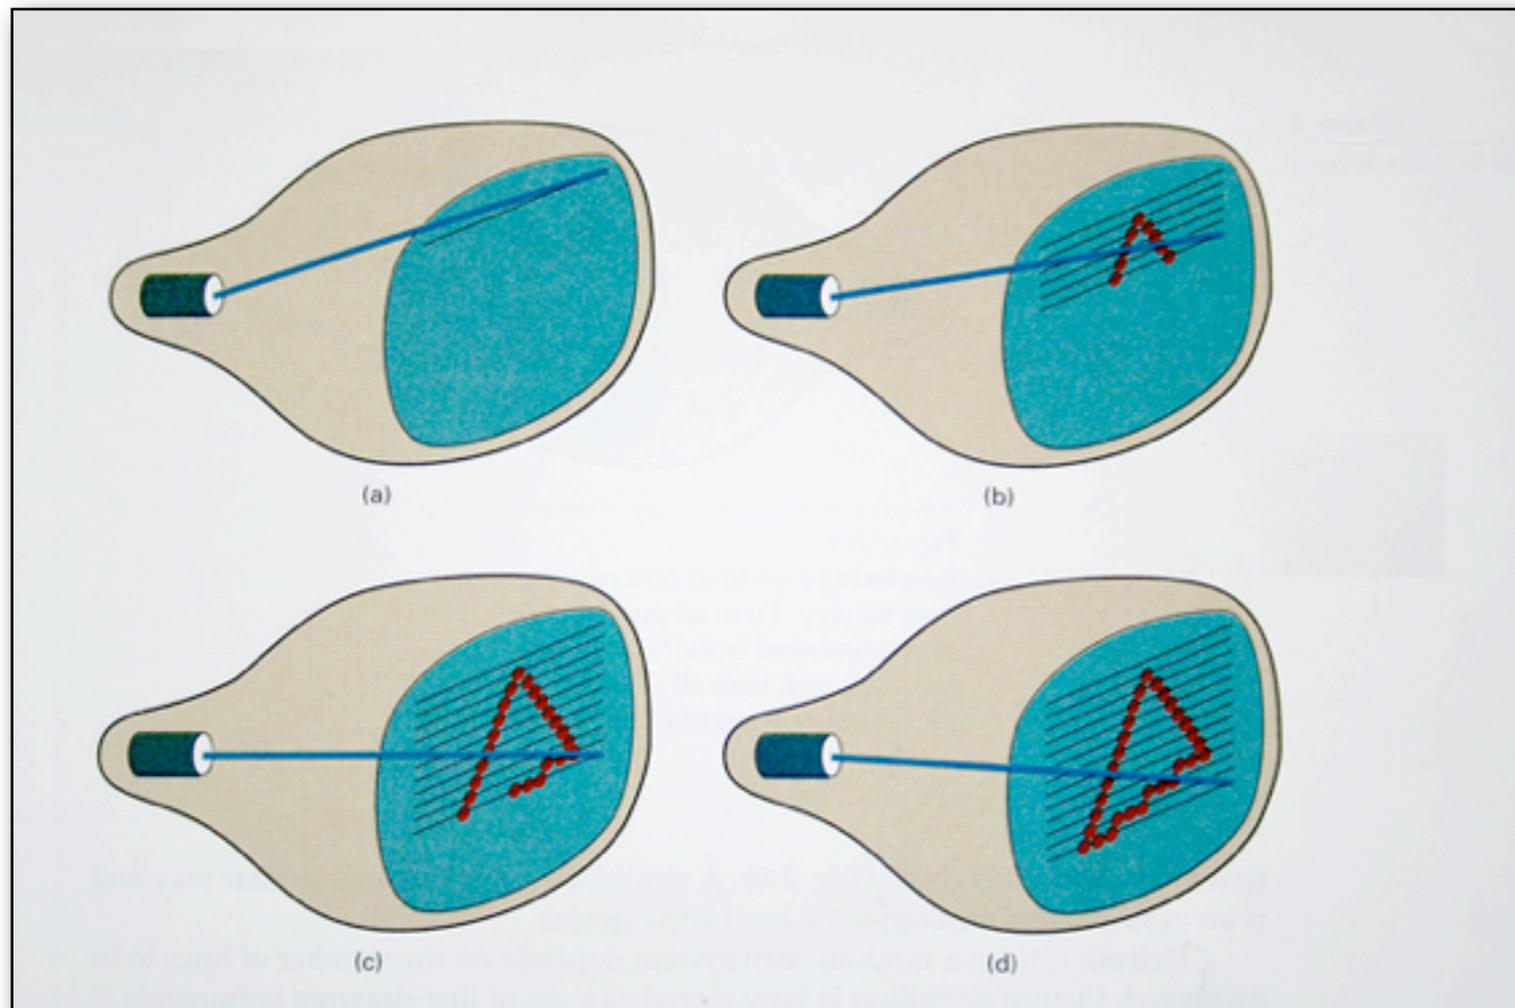

- Roberts (1963), Appel (1967)
Remoção de linhas ocultas
- Warnock (1969), Watkins (1970)
Remoção de superfícies ocultas
- Sutherland (1974)
visibilidade=ordenação

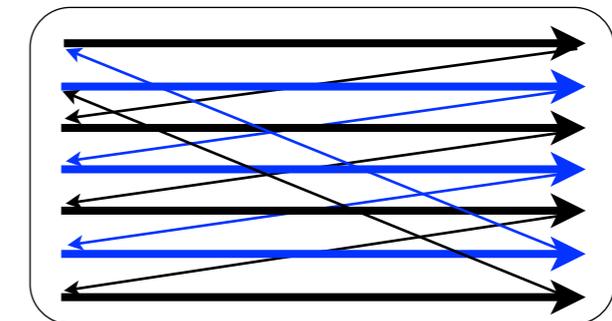

Dispositivos de visualização

Dispositivo Raster com CRT

varrimento progressivo

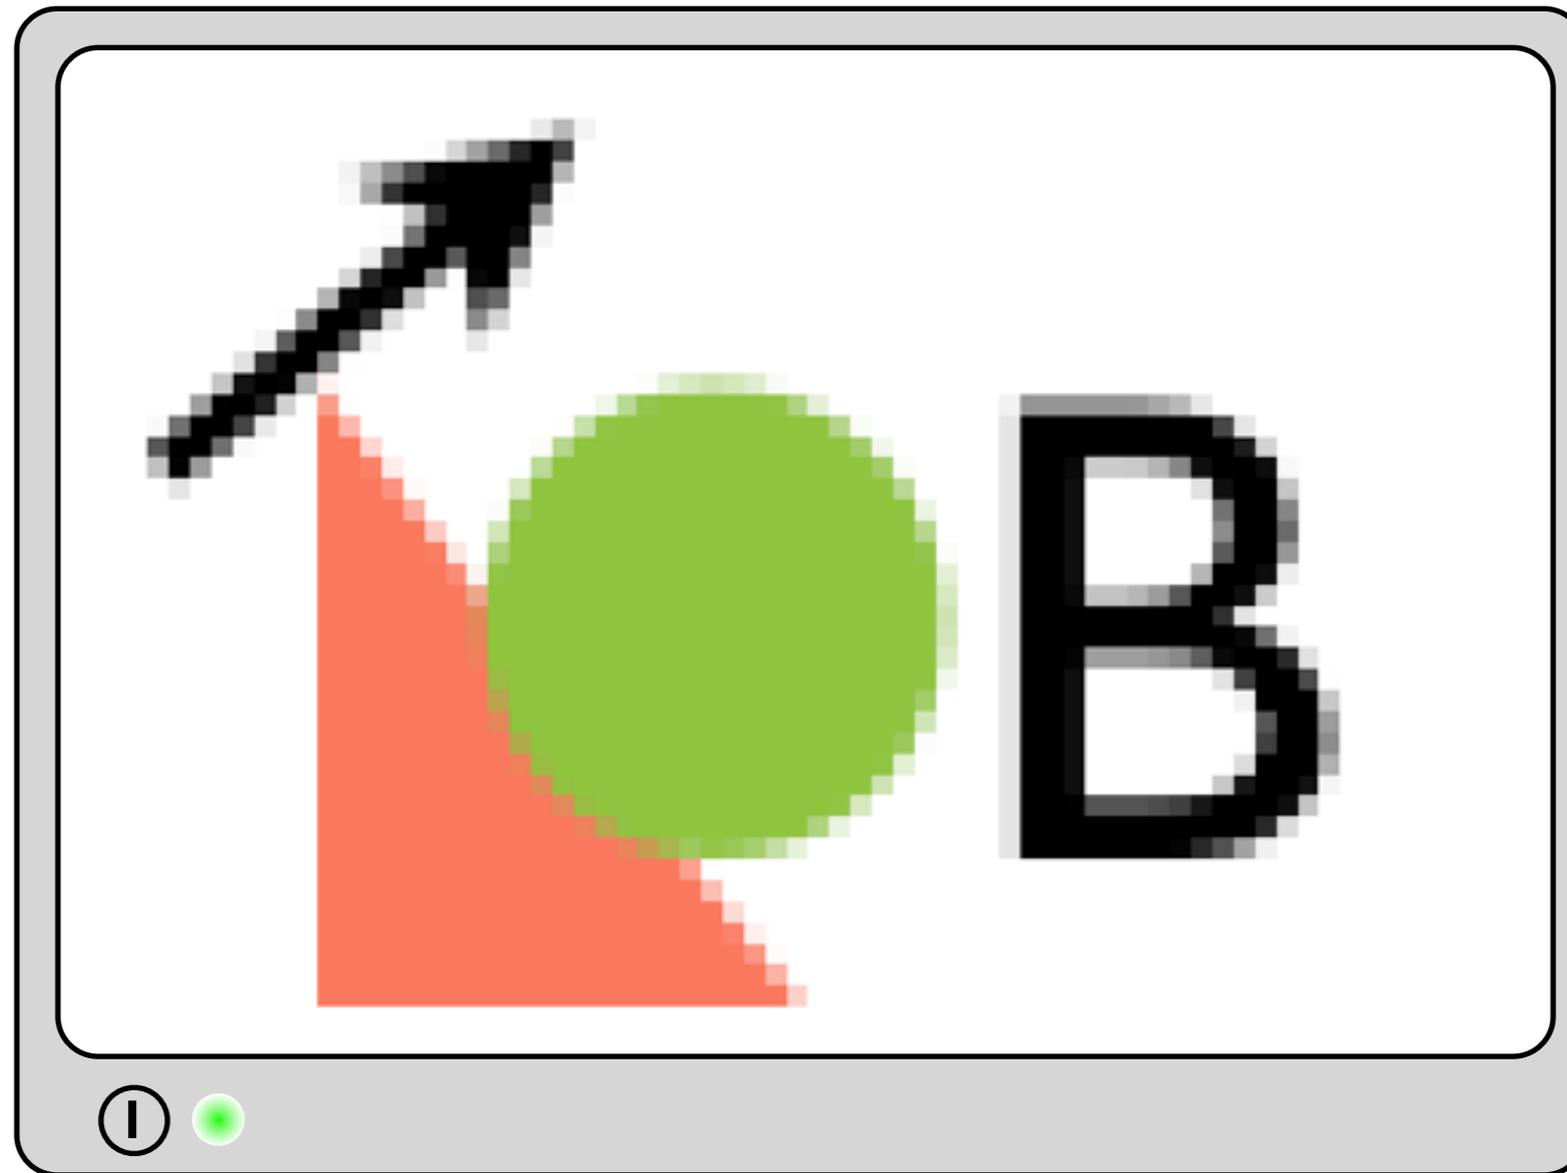

varrimento entrelaçado

O ecrã é varrido ciclicamente, por linhas horizontais, durante as quais o(s) feixe(s) pode ser ligado(s)/desligado(s) a intervalos regulares.

Retorno horizontal no final de cada linha e retorno vertical no final de cada imagem.

O varrimento cria uma grelha retilínea de pontos que podem ser iluminados individualmente (pixel = picture element).

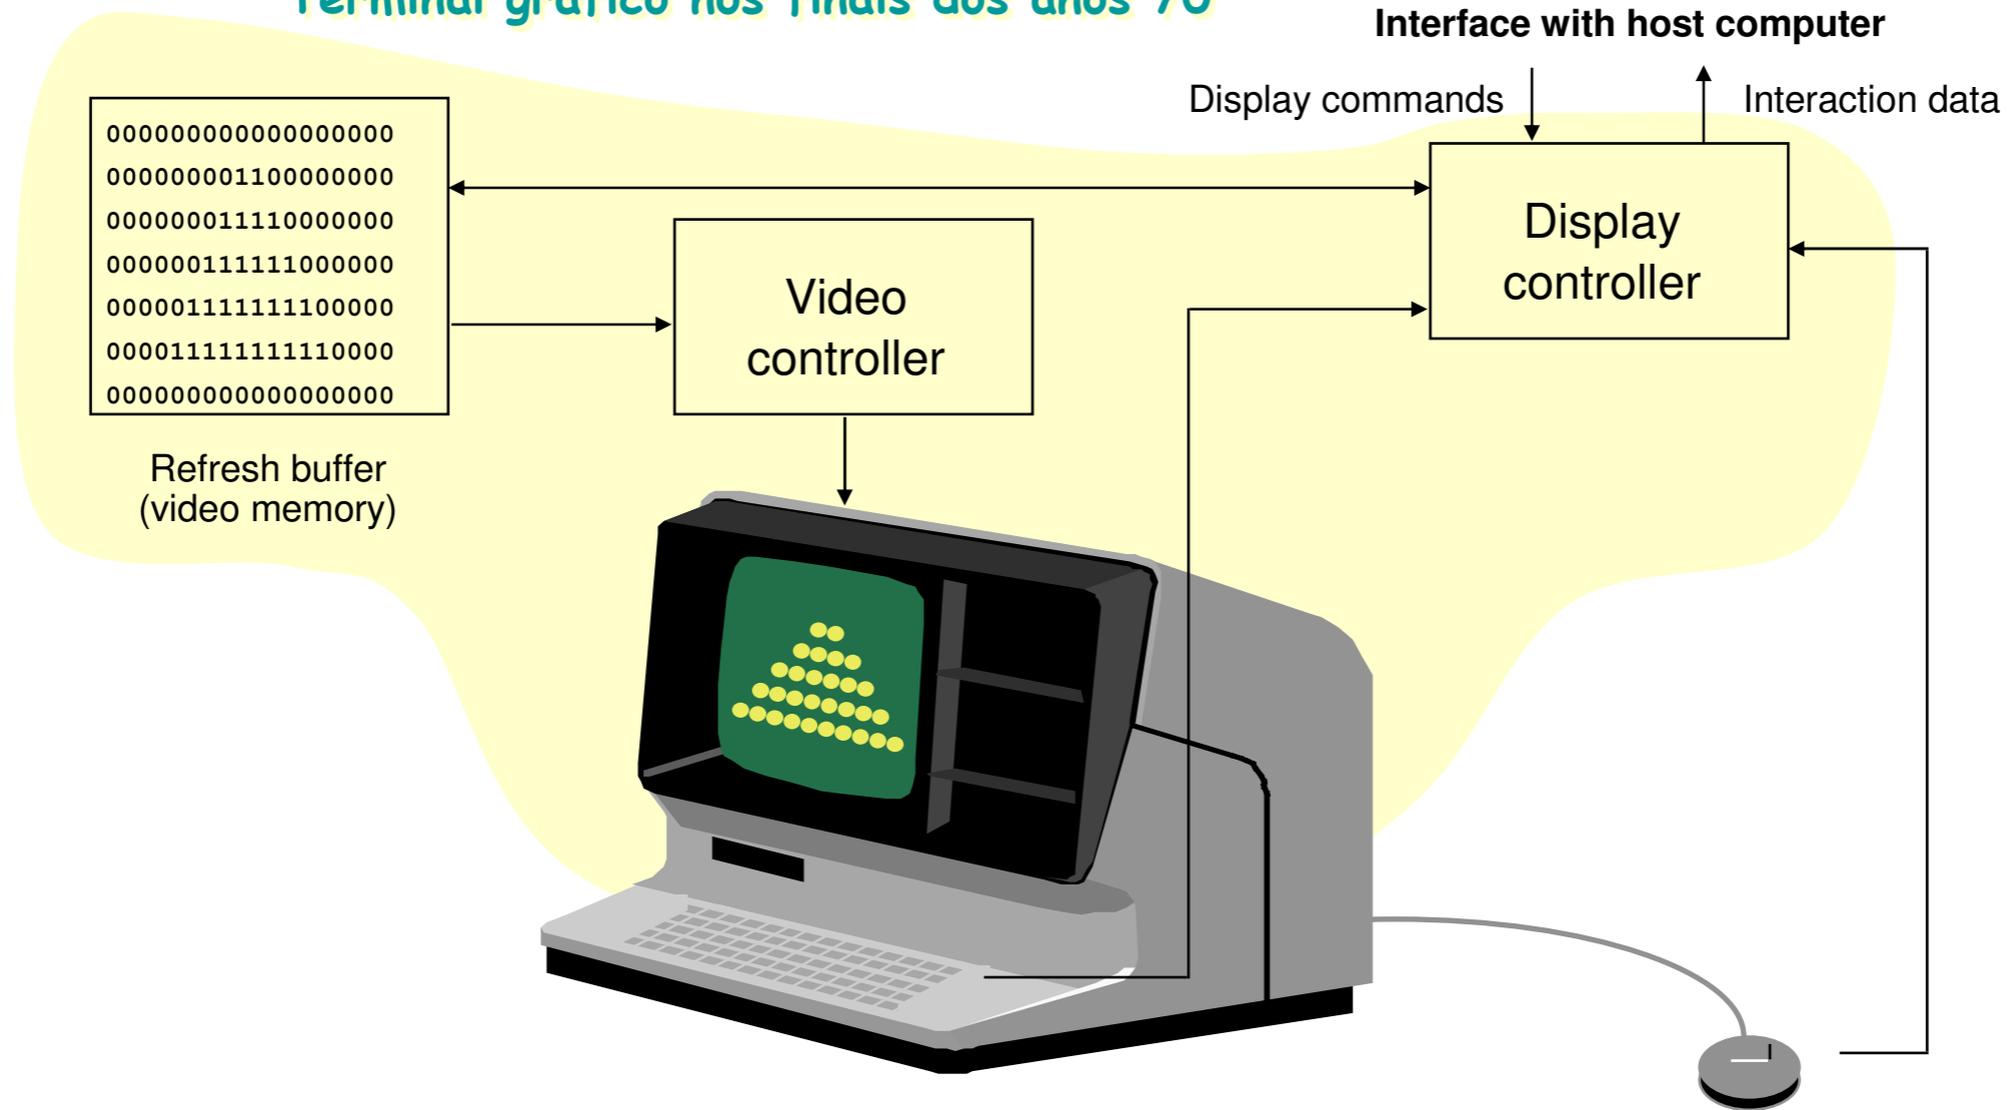

Dispositivos de visualização

A qualidade da imagem aumentará com a resolução do ecrã.

Dispositivos de visualização

Terminal gráfico nos finais dos anos 70

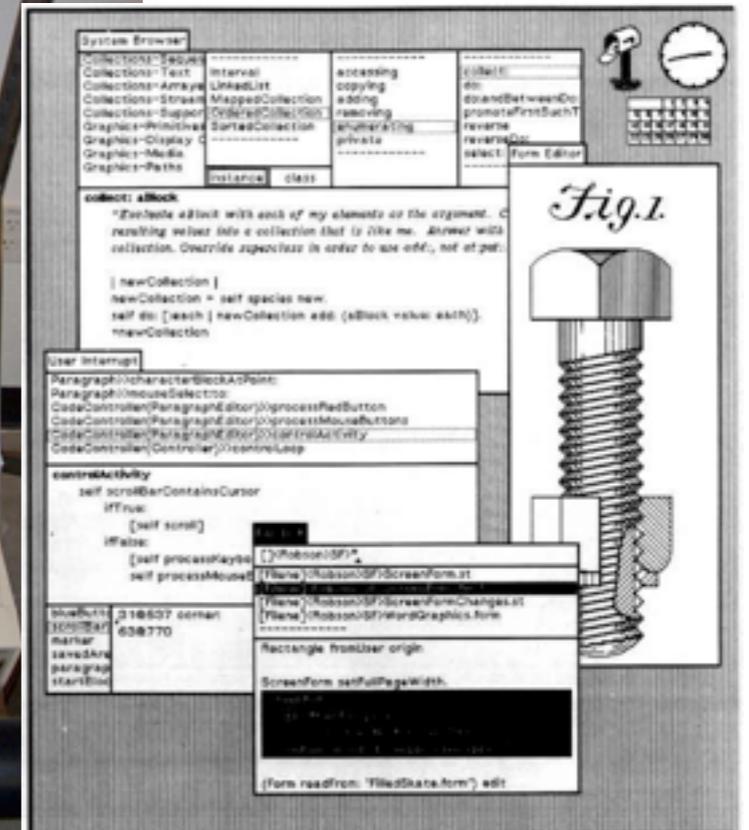

Raster Display Device

(Terminal raster)

M.Próspero

Xerox Parc (1970s)

- 1973: Alto - the first computer with the desktop metaphor and a mouse driven graphical user interface
- Inspired by the oN-Line System (NLS)
- more than 2000 units over the next 10 years
- Raster display
- BitBlt operations
- WYSIWYG applications

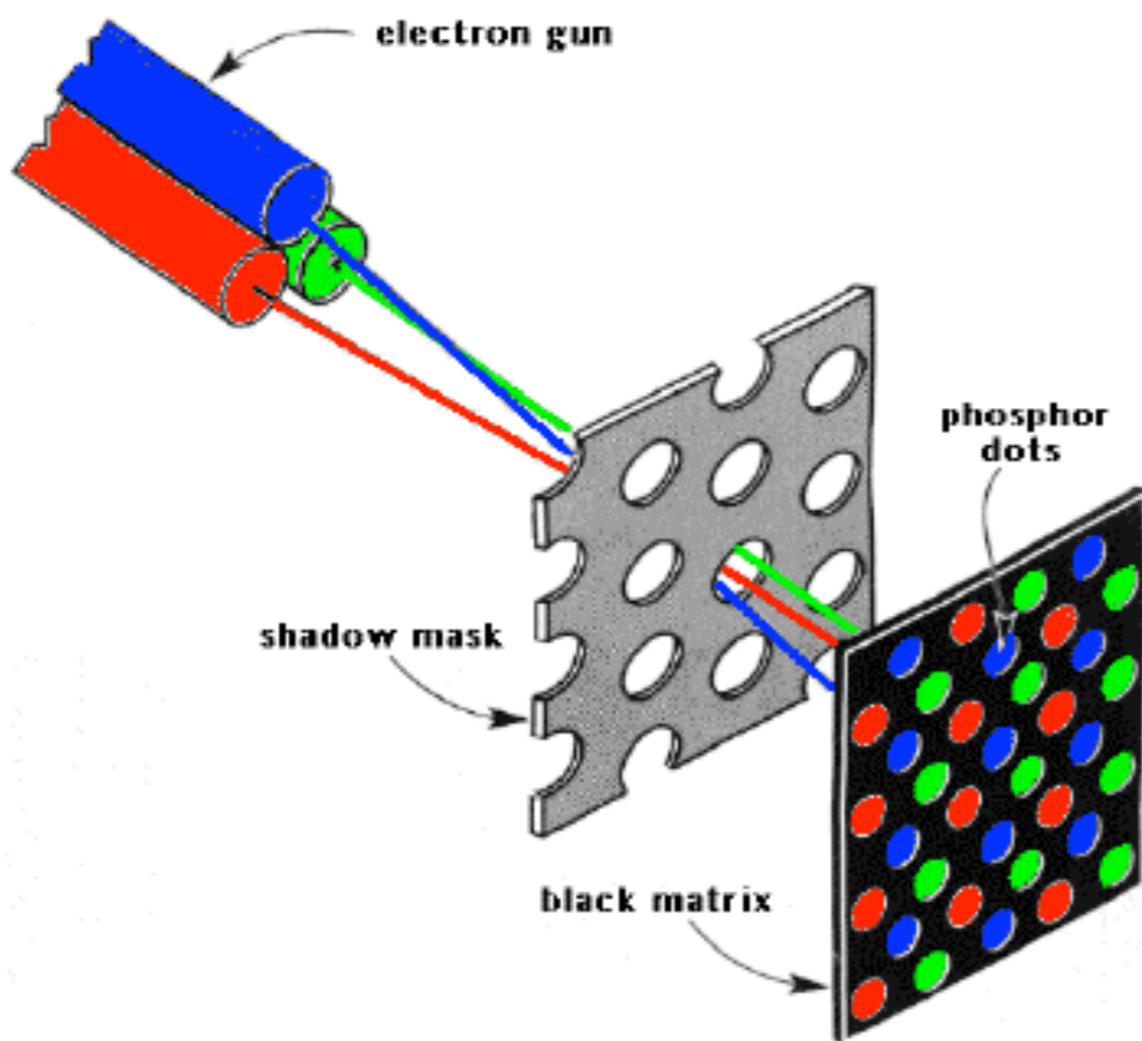

Charles P. Thacker

*2009 Turing Award

Dispositivos de visualização

CRT a cores

A intensidade de cada feixe pode ser controlada, fazendo variar a quantidade de luz de cada cor que atinge os pontos de fósforo.

Exemplos:

VERDE+VERMELHO=AMARELO

AZUL+VERMELHO=LOLIPOP

http://www.colorado.edu/physics/2000/tv/merging_color.html

First Raster Video Games (1980s)

Space Invaders

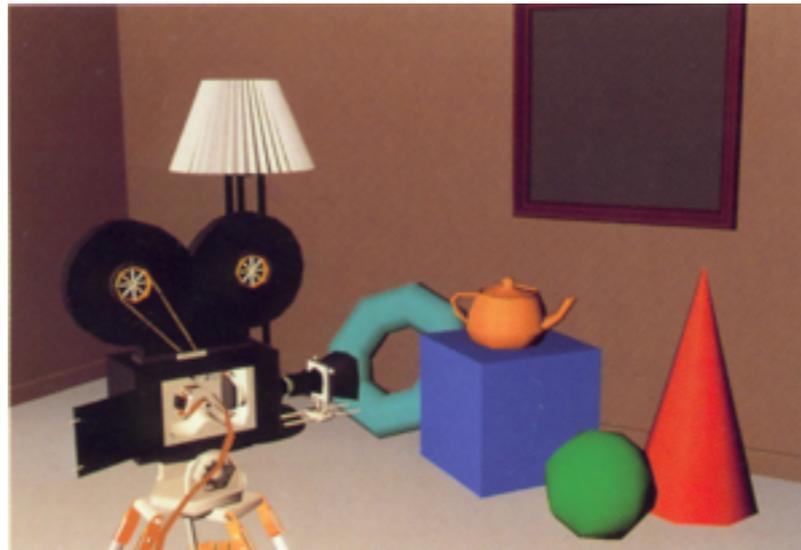

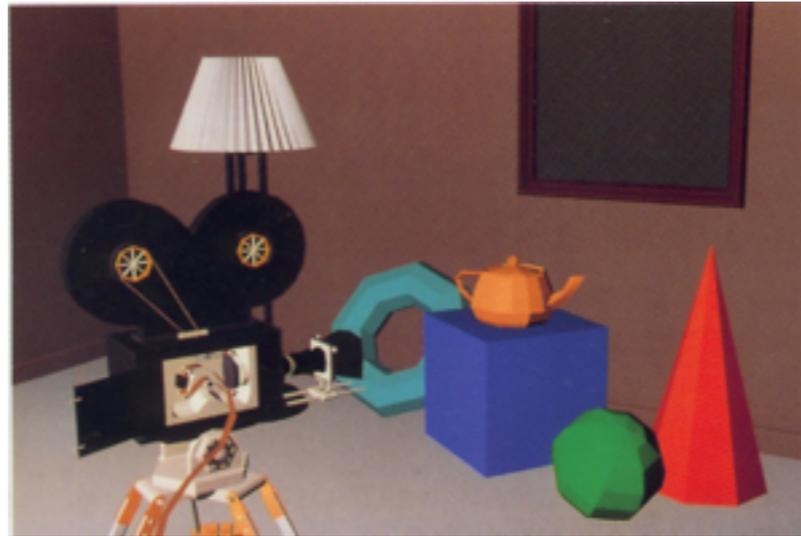

Pac Man

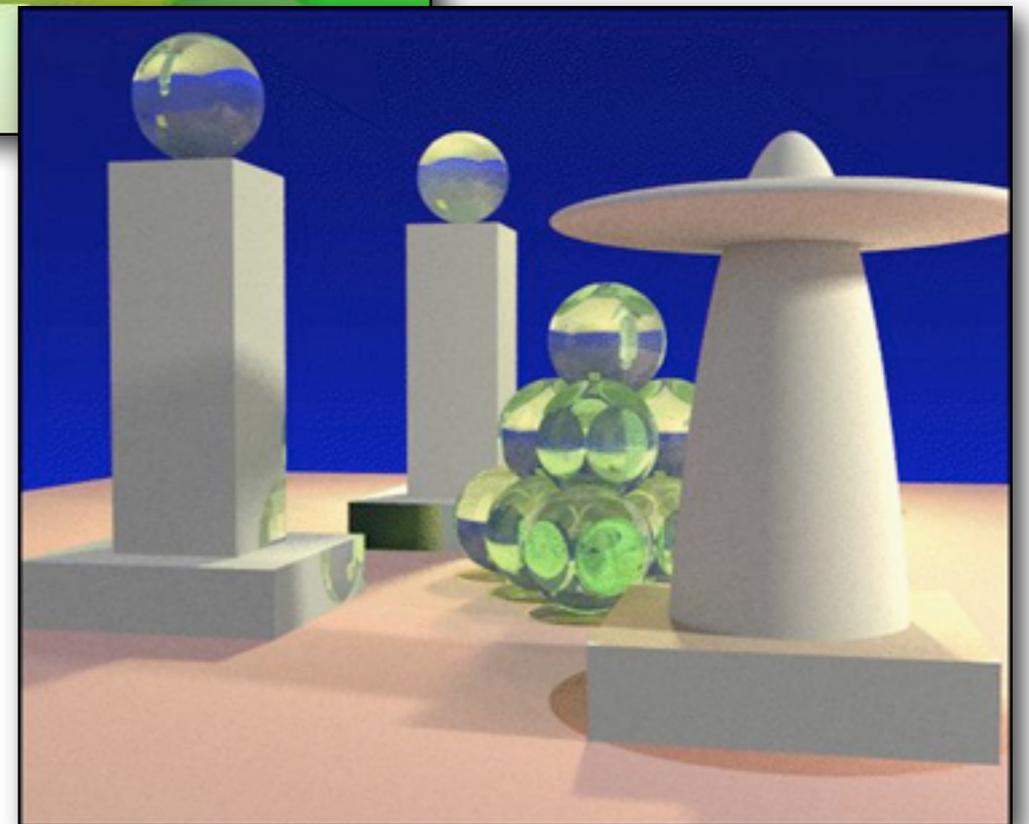

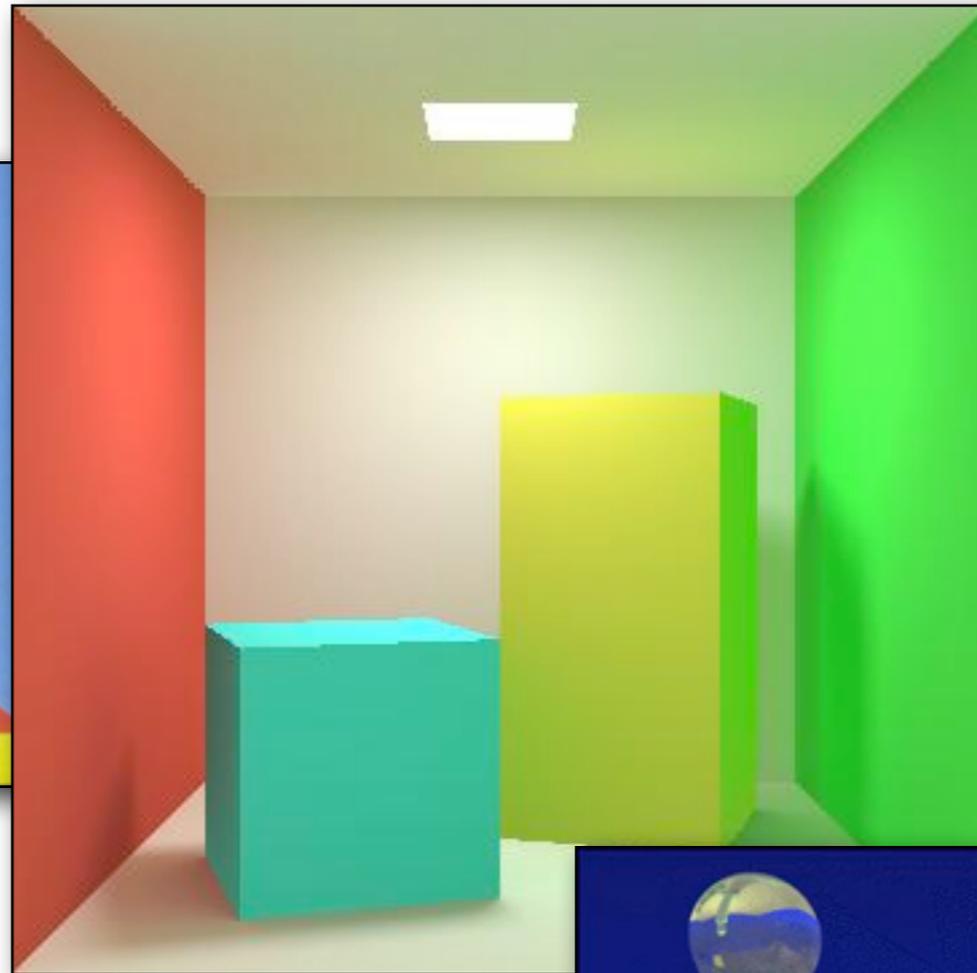

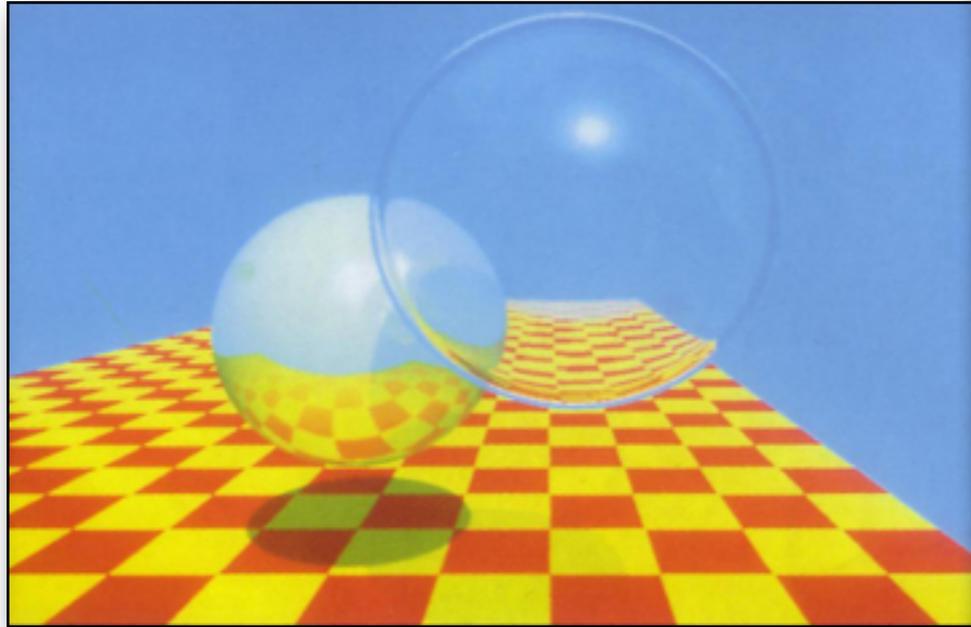

Moon Patrol

Desafios: 1970's (gráficos raster)

- Gouraud (1971)
Iluminação difusa
- Phong (1974)
reflexão especular
- Blinn (1974)
superfícies curvas
texturas
- Catmull (1974)
algoritmo Z-buffer
- Crow (1977)
sombras

Desafios: 1980's (iluminação global)

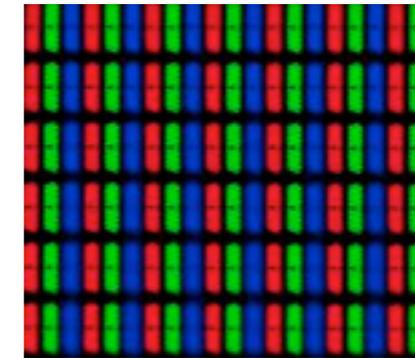

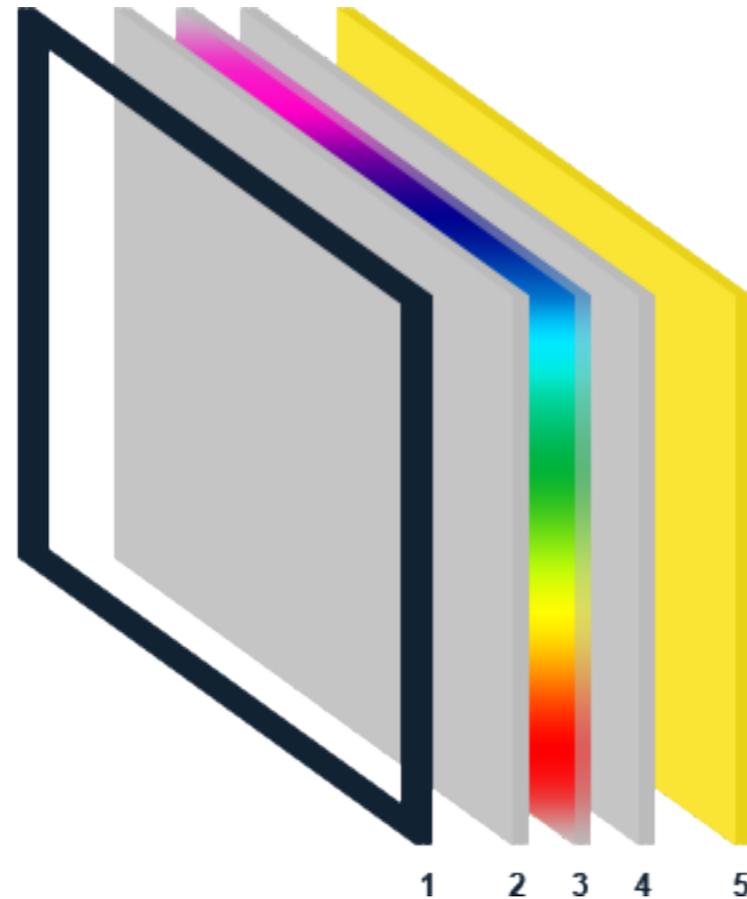

- Whitted (1980)
ray tracing
- Goral et. al (1984), Cohen (1985)
radiosidade
- Kajiya (1986)
rendering equation, path tracing

Dispositivos de visualização

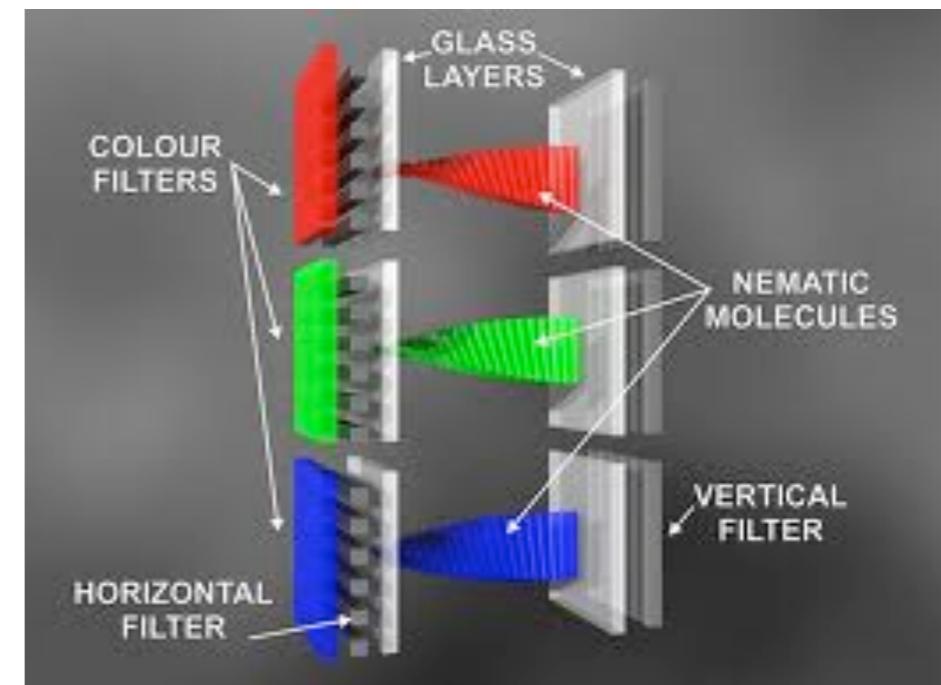

LCD - Ecrã de cristais líquidos

1. Bezel
2. Polarized Front Glass
3. Liquid Crystals
4. Polarized Rear Glass
5. Backlight

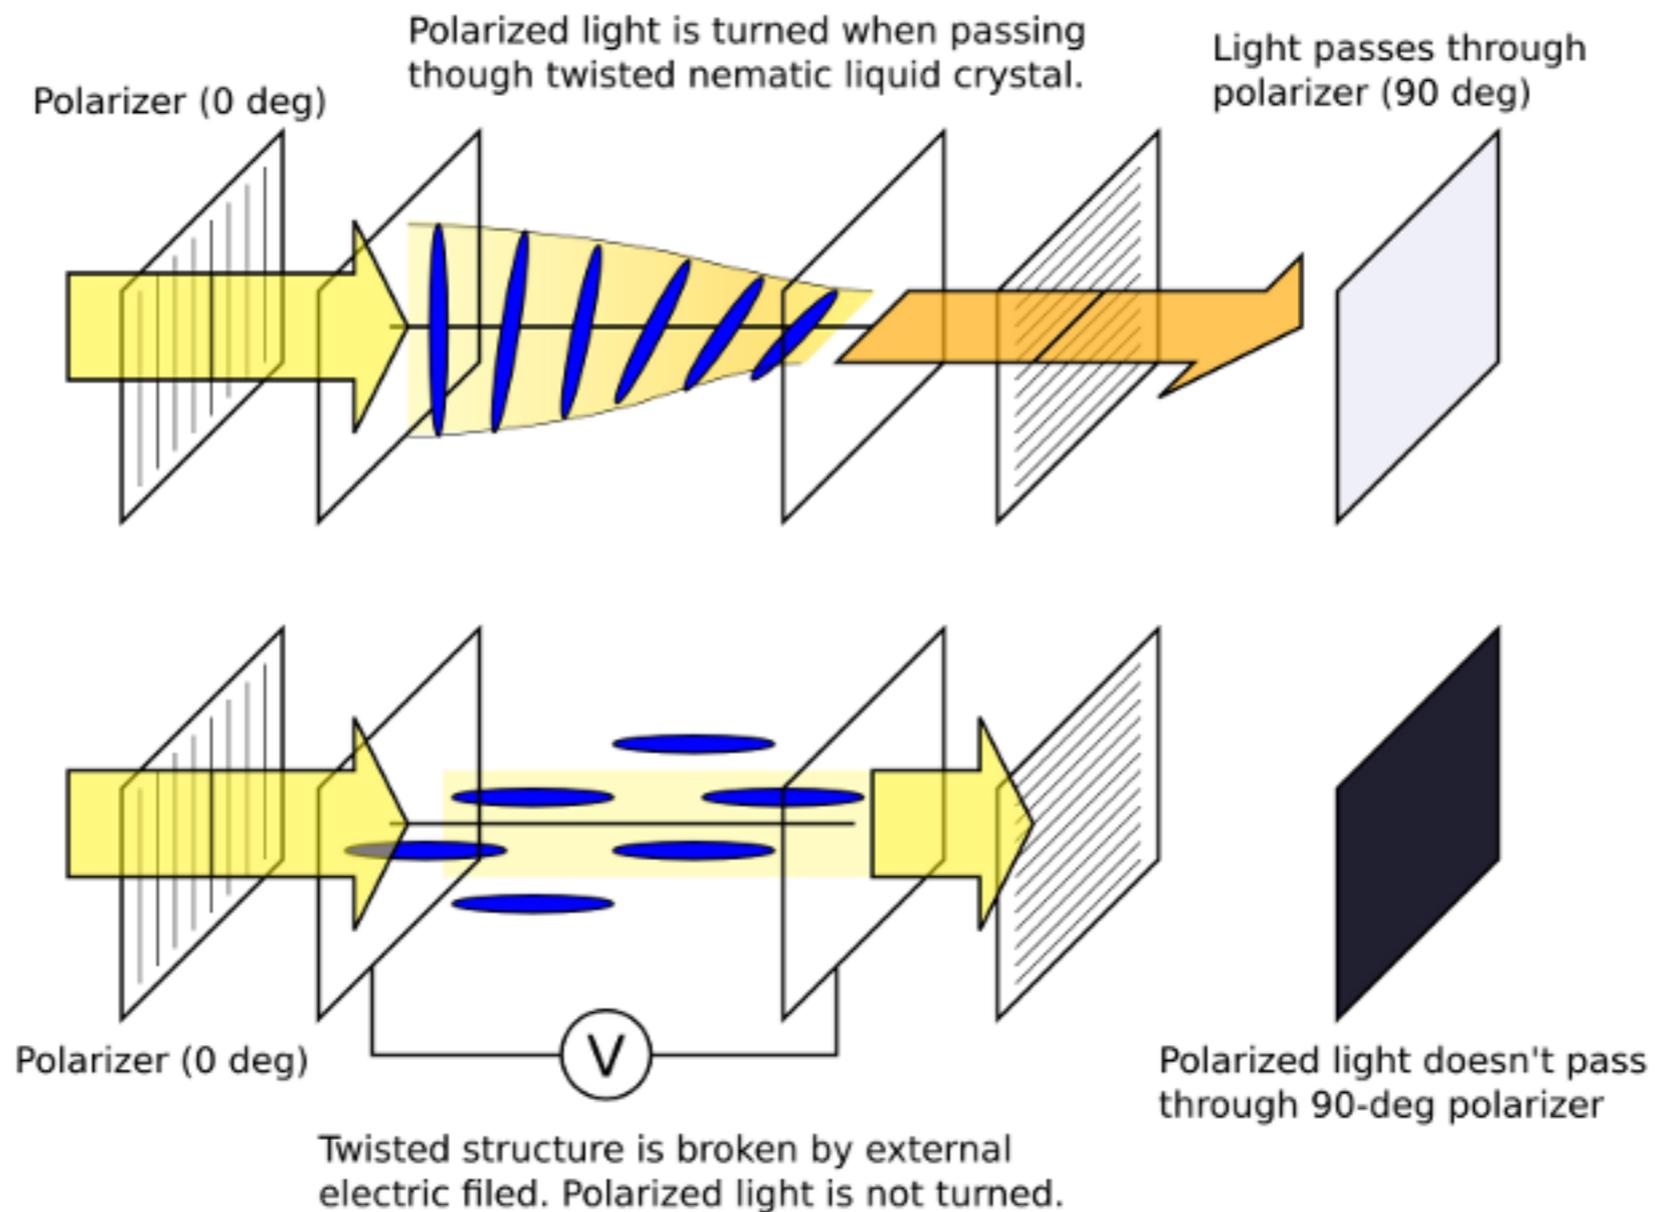

subpixels

Num LCD, a luz branca está permanentemente a ser emitida por detrás, podendo ser bloqueada ao nível de cada pixel por um conjunto de filtros que formam os subpixels.
