## Escrita de símbolos matemáticos

<http://physics.nist.gov/Document/typefaces.pdf>

**Typefaces for Symbols in Scientific Manuscripts**

Most word processing software now in use at NIST is capable of producing lightface (that is, regular) or boldface letters of the Latin or Greek alphabets in both roman (upright) and italic (sloping) types. The understandability of typed and typeset scientific and technical publications is facilitated if symbols are in the correct typeface. The following rules are taken from International Organization for Standardization (ISO) International Standard ISO 31-0:1992 to ISO 31-13:1992.

The typeface in which a symbol appears helps to define what the symbol represents. For example, irrespective of the typeface used in the surrounding text, "A" would be typed or typeset in

italic type for the smaller quantities area: A: 19/04/2001 17:56:55  
roman type for the unit and prefixes: A: Options +  
From National Institute of Standards and Technology (US)  
<http://physics.nist.gov/Document/typefaces.pdf>  
The typeface in which a symbol appears helps to define what the symbol represents. For example, irrespective of the typeface used in the surrounding text, "A" would be typed or typeset in

- symbols for *quantities and variables*: italic;
- symbols for *units*: roman;
- symbols for *descriptive terms*: roman.

scientific and technical publications is facilitated if symbols are in the correct typeface. The following rules are taken from International Organization for Standardization (ISO) International Standard ISO 31-0:1992 to ISO 31-13:1992.

$t = 3 \text{ s}$	$t$ time, s second	$T = 22 \text{ K}$	$T$ temperature, K kelvin
$r = 11 \text{ cm}$	$r$ radius, cm centimeter	$\lambda = 633 \text{ nm}$	$\lambda$ wavelength, nm nanometer

Constants are usually physical quantities and thus their symbols are italic; however, in general, symbols used as subscripts and superscripts are roman if descriptive:

$N_A$ Avogadro constant, $A$ Avogadro	$R$ molar gas constant
$\theta_D$ Debye temperature, $D$ Debye	$Z$ atomic number
$e$ elementary charge	$m_e$ mass, e electron

Running numbers and symbols for variables in mathematical equations are italic, as are symbols for parameters such as  $a$  and  $b$  that may be considered constant in a given context:

$$y = \sum_{n=1}^{\infty} z_n z_n \quad x^2 = ay^2 + bz^2$$

Symbols for vectors are boldface italic, symbols for tensors are sans-serif bold italic, and symbols for matrices are boldface italic:

$$\boldsymbol{A} \cdot \boldsymbol{B} = C \quad (\text{vectors}) \quad T \quad (\text{tensors}) \quad A = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix} \quad (\text{matrices})$$

Symbols used as subscripts and superscripts are italic if they represent quantities or variables:

$c_p$ pressure	$q_m$ mass	$\sigma_s$ solid angle	$\omega_i$ $z$ coordinate
----------------	------------	------------------------	---------------------------

Units — roman

The symbols for units and SI prefixes are roman:

m meter	g gram	L liter
cm centimeter	$\mu\text{g}$ microgram	mL milliliter

(over)

The typeface in which a symbol appears helps to define what the symbol represents. For example, irrespective of the typeface used in the surrounding text, “A” would be typed or typeset in

- italic type for the *scalar quantity* area:  $A$ ;
- roman type for the *unit* ampere:  $A$ ;
- italic boldface for the *vector quantity* vector potential:  $\mathbf{A}$ .

More specifically, the three major categories of symbols found in scientific and technical publications should be typed or typeset in either italic or roman type, as follows:

- symbols for *quantities* and *variables*: italic;
- symbols for *units*: roman;
- symbols for *descriptive terms*: roman.

“*italic*” = *itálico*

“roman” = redondo

O volt é a unidade de potencial eléctrico. O símbolo da grandeza potencial eléctrico é  $V$  e o símbolo da unidade SI é  $V$ .

$$V = 4,5 V$$

Constants are usually physical quantities and thus their symbols are italic; however, in general, symbols used as subscripts and superscripts are roman if descriptive:

$N_A$	Avogadro constant, A Avogadro	$R$	molar gas constant
$\theta_D$	Debye temperature, D Debye	$Z$	atomic number
$e$	elementary charge	$m_e$	$m$ mass, e electron

Running numbers and symbols for variables in mathematical equations are italic, as are symbols for parameters such as  $a$  and  $b$  that may be considered constant in a given context:

$$y = \sum_{i=1}^m x_i z_i$$

$$x^2 = ay^2 + bz^2$$

Symbols for vectors are boldface italic, symbols for tensors are sans-serif bold italic, and symbols for matrices are boldface italic:

$\mathbf{A} \cdot \mathbf{B} = \mathbf{C}$  (vectors)

$\mathbf{T}$  (tensors)

$\mathbf{A} = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix}$  (matrices)

$\mathbf{T}$

$\mathbf{T}$   
serifas...

Symbols used as subscripts and superscripts are italic if they represent quantities or variables:

$c_p$   $p$  pressure

$q_m$   $m$  mass

$\sigma_\Omega$   $\Omega$  solid angle

$\omega_z$   $z$   $z$  coordinate

## Units — roman

The symbols for units and SI prefixes are roman:

m meter

cm centimeter

g gram

μg microgram

L liter

mL milliliter

SI prefixes

$1000^m$	$10^n$	Prefix	Symbol	Since <sup>[1]</sup>	Short scale	Long scale	Decimal

1. The metric system was introduced in 1795 with six prefixes. The other dates relate to recognition by a resolution of the CGPM.  
2. The 1948 recognition of the micron by the CGPM was abrogated in 1967.

Portugal, 1 bilião usualmente  $10^{12}$ , fora de contexto técnico-científico

### Descriptive terms — roman

Symbols representing purely descriptive terms (for example, the chemical elements) are roman, as are symbols representing mathematical constants that never change (for example,  $\pi$ ) and symbols representing explicitly defined functions or well defined operators (for example,  $\Gamma(x)$  or  $\text{div}$ ):

#### Chemical elements:

Ar argon

B boron

C carbon

#### Mathematical constants, functions, and operators:

e base of natural logarithms

$\Sigma x_i$   $\Sigma$  sum of

$\ln x$   $\log_e$  natural logarithm of

$\exp x$  exp exponential of

$\sin x$  sin sine of

$\lg x$   $\log_{10}$  common (decimal) logarithm of

$\text{d}x/\text{d}t$  d 1st derivative of

$\log_a x$   $\log_a$  logarithm to the base  $a$  of

$\text{lb } x$   $\log_2$  binary logarithm of

Symbols used as subscripts and superscripts are roman if descriptive:

$\varepsilon_0^{(\text{ir})}$  ir irrational

$E_k$  k kinetic

$V_m^1$  m molar, 1 liquid phase

$\mu_B$  B Bohr

Sample equations showing correct type

$$F = \frac{q_1 q_2}{4\pi\epsilon_0 r^2}$$

$$\varphi_{\text{B}} = x_{\text{B}} V_{\text{m},\text{B}}^* / \sum x_{\text{A}} V_{\text{m},\text{A}}^*$$

$$E = mc^2$$

$$F = ma$$

$$E_{\text{a}} = RT^2 \text{d}(\ln k)/\text{d}T$$

$$\tilde{p}_{\text{B}} = \lambda_{\text{B}} \lim_{p \rightarrow 0} (x_{\text{B}} p / \lambda_{\text{B}})$$

$$pV = nRT$$

$$c_1 = \lambda^{-5} / [\exp(c_2/\lambda T) - 1]$$

$$\frac{F}{Q} = -\mathbf{grad} V$$

### Greek alphabet in roman and italic type

The following table shows the proper form, in both roman and italic type, of the upper-case and lower-case letters of the Greek alphabet.

Greek alphabet in roman and italic type

alpha	A	$\alpha$	<i>A</i>	$\alpha$
beta	B	$\beta$	<i>B</i>	$\beta$
gamma	$\Gamma$	$\gamma$	<i>\Gamma</i>	$\gamma$
delta	$\Delta$	$\delta$	<i>\Delta</i>	$\delta$
epsilon	E	$\varepsilon, \epsilon$	<i>E</i>	$\varepsilon, \epsilon$
zeta	Z	$\zeta$	<i>Z</i>	$\zeta$
eta	H	$\eta$	<i>H</i>	$\eta$
theta	$\Theta, \Theta^{(a)}$	$\theta, \vartheta^{(b)}$	<i>\Theta, \Theta^{(a)}</i>	$\theta, \vartheta^{(b)}$
iota	I	$\iota$	<i>I</i>	$\iota$
kappa	K	$\kappa, \varkappa^{(b)}$	<i>K</i>	$\kappa, \varkappa^{(b)}$
lambda	$\Lambda$	$\lambda$	<i>\Lambda</i>	$\lambda$
mu	M	$\mu$	<i>M</i>	$\mu$
nu	N	$\nu$	<i>N</i>	$\nu$
xi	$\Xi$	$\xi$	<i>\Xi</i>	$\xi$
omicron	O	$\omicron$	<i>O</i>	$\omicron$
pi	$\Pi$	$\pi, \varpi$	<i>\Pi</i>	$\pi, \varpi$
rho	P	$\rho, \varrho^{(b)}$	<i>P</i>	$\rho, \varrho^{(b)}$
sigma	$\Sigma$	$\sigma$	<i>\Sigma</i>	$\sigma$
tau	T	$\tau$	<i>T</i>	$\tau$
upsilon	$\Upsilon$	$\upsilon$	<i>\Upsilon</i>	$\upsilon$
phi	$\Phi$	$\varphi, \phi$	<i>\Phi</i>	$\varphi, \phi$
chi	X	$\chi$	<i>X</i>	$\chi$
psi	$\Psi$	$\psi$	<i>\Psi</i>	$\psi$
omega	$\Omega$	$\omega$	<i>\Omega</i>	$\omega$

<sup>(a)</sup> The International Organization for Standardization (ISO) gives only the first of these two letters (see ISO International Standard ISO 31-0:1992).

<sup>(b)</sup> ISO gives these two letters in the reverse order (see ISO International Standard ISO 31-0:1992).

[Download 30-day trial »](#)  
[Why Upgrade? »](#)

MathType is a powerful interactive equation editor for Windows and Macintosh that lets you create mathematical notation for word processing, web pages, desktop publishing, presentations, and for TeX, LaTeX, and MathML documents. MathType works with 100s of applications and websites, allowing you to put ***Equations Everywhere and Anywhere™***.

[Features & Benefits](#)
[Works With ...](#)
[Why Upgrade?](#)
[Reviews](#)
[FAQs](#)

**Features & Benefits | [Full Feature List](#)**

Here are just a few of MathType's many features:

**Works with Many Applications**

While many MathType users create equations for **Microsoft Word** documents and **PowerPoint** presentations, MathType also works with many, many other applications and websites and we are adding more and more every day:

- Add equations to **Quark** and **InDesign** documents.
- Copy equations from websites like **Wikipedia**, **PlanetMath**, etc. for use in your own work. You can author new equations for those websites as well.
- Copy equations from **Mathematica** or **Maple** into your research.
- Use equations to label **DeltaGraph** scientific graphs and **Excel** spreadsheets.
- Work with **TeX** and **LaTeX** editors and documents.

**Use Wikipedia, PlanetMath, and other websites as sources of equations for your work:**

Download MathDaisy<sup>™</sup>

### What to expect after installing MathType

You will have 30 days in which to enjoy all of the features of MathType. If you do not purchase MathType within 30 days, it will become MathType Lite. This is exactly like Equation Editor, with the bonus of MathType's fonts and symbols, which you may use with our compliments.

Once you've tried out MathType and like it (we think you will), just come back here to our [online store](#) and purchase a product key. Whether you register your copy during or after your trial, you will not need to reinstall. Choose "Unlock MathType" from MathType's Help menu and enter your new product key.

**LyX – The Document Processor**

LyX is a document processor that encourages an approach to writing based on the *structure* of your documents (**WYSIWYM**) and not simply their appearance (**WYSIWYG**).

LyX combines the power and flexibility of **TeX/LaTeX** with the ease of use of a **graphical interface**. This results in world-class support for creation of mathematical content (via a fully integrated equation editor) and structured documents like academic articles, theses, and books. In addition, staples of scientific authoring such as reference list and index creation come standard. But you can also use LyX to create a letter or a novel or a theatre play or **film script**. A broad array of ready, well-designed document layouts are built in.

LyX is for people who want their writing to look great, right out of the box. No more endless tinkering with formatting details, "finger painting" font attributes or futzing around with page boundaries. You just write. On screen, LyX looks like any word processor; its printed output — or richly cross-referenced PDF, just as readily produced — looks like nothing else.

LyX is released under a **Free Software/Open Source license**, runs on Linux/Unix, Windows, and **Mac OS X**, and is available in **several languages**.

LyX Manuals

August 17, 2009

This document collects all LyX Manuals picked up together into one PDF file. It targets the LyX 1.6(.4) release.

Currently there is no table of contents and it is not easy to automatically produce such a table or even bookmarks. Another drawback is that there will be a few glitches with the page numbering and formatting from time to time.

**Currently these manuals are contained:**

- Introduction to LyX
- The LyX Tutorial
- The LyX User's Guide
- Additional LyX Features
- LyX's detailed Figure, Table, Floats, Notes, Boxes and External Material
- LyX's detailed Math manual
- Customizing LyX: Features for the Advanced User
- LyX Keyboard Shortcuts
- LFNs documentation

<http://www.latexsearch.com>

Uma base de dados de expressões matemáticas escritas em LaTeX

The screenshot displays the LaTeX Search Beta website interface. The search term 'chemistry' has been entered, resulting in 14 search results. The results are sorted by relevance, with 10 results per page. The first result is 'Chemistry of the Positive and Negative Electrical Discharges Formed in Liquid Water and Above a Gas-Liquid Surface' from Plasma Chemistry and Plasma Processing (2009). The second result is 'Gas-Phase Chemistry of Pulsed n-Hexane Discharge' from Plasma Chemistry and Plasma Processing (2009). The third result is 'Countable Set of Limit Cycles for the Equation  $\frac{dw}{dz} = \frac{P_n(z,w)}{Q_n(z,w)}$ ' from the Journal of Dynamical and Control Systems (1998). The fourth result is 'On Tax Over-Shifting in Wage Bargaining Models' from the Atlantic Economic Journal (2007). The fifth result is 'Theoretical Study on the Interferometry of Thin EHL Film Measurement' from Tribology Letters (2008).

The website also features a 'SOURCE' section on the left, a 'PUBLICATION YEAR' bar chart, and a 'SEARCH RESULT' section on the right. The 'SOURCE' section lists various journals and their respective result counts. The 'PUBLICATION YEAR' bar chart shows the distribution of results by year. The 'SEARCH RESULT' section provides a detailed view of the search results, including the title, source, and a 'View Latex Code' link for each result.

**The TeX Users Group (TUG)** was founded in 1980 to provide an organization for people who are interested in typography and font design, and/or are users of the TeX typesetting system invented by [Donald Knuth](#).

**TUG is a not-for-profit organization by, for, and of its members**, also representing the interests of TeX users worldwide. It is nearly entirely member-supported, so if you use any TeX-related programs (TeX, [LaTeX](#), [ConTeXt](#), [Metafont](#), [MetaPost](#), [Texinfo](#), [et al.](#)), please consider [joining TUG](#) (or [another TeX user group](#)). The [membership benefits](#) include our journal [TUGboat](#) (available both in print and online), as well as the TeX software collection [TeX Live](#), [proTeXt](#), [MacTeX](#), and [more](#).

The **Comprehensive TeX Archive Network (CTAN)** is the primary repository for TeX-related software on the Internet. CTAN has many thousands of items: the [TeX Catalogue](#) and [CTAN search page](#) can help you find what you need.

If you are new to TeX and are looking for a system to install, or have questions to ask, [click here to get started](#).

# Bitmap

## Bitmap

From Wikipedia, the free encyclopedia

*For other uses, see [Bitmap \(disambiguation\)](#).*

In **computer graphics**, a **bitmap** or **pixmap** is a type of **memory** organization or **image file format** used to store **digital images**. The term *bitmap* comes from the **computer programming** terminology, meaning just a *map of bits*, a spatially mapped **array of bits**. Now, along with *pixmap*, it commonly refers to the similar concept of a spatially mapped array of **pixels**. **Raster** images in general may be referred to as bitmaps or pixmaps, whether synthetic or photographic, in files or memory.

In some contexts, the term bitmap implies one bit per pixel, while pixmap is used for images with multiple bits per pixel.<sup>[1][2]</sup>

Many **graphical user interfaces** use bitmaps in their built-in graphics subsystems;<sup>[3]</sup> for example, the **Microsoft Windows** and **OS/2** platforms' **GDI** subsystem, where the specific format used is the *Windows and OS/2 bitmap file format*, usually named with the **file extension** of **.BMP** (or **.DIB** for *device-independent bitmap*). Besides **BMP**, other file formats that store literal bitmaps include **InterLeaved Bitmap** (**ILBM**), **Portable Bitmap** (**PBM**), **X Bitmap** (**XBM**), and **Wireless Application Protocol Bitmap** (**WBMP**). Similarly, most other image file formats, such as **JPEG**, **TIFF**, **PNG**, and **GIF**, also store bitmap images (as opposed to **vector graphics**), but they are not usually referred to as *bitmaps*, since they use **compressed** formats internally.

Contents <span>[hide]</span>
1 Pixel storage
2 Device-independent bitmaps and BMP file format
2.1 Other bitmap file formats
3 See also
4 References
5 External links

### Pixel storage

[[edit](#)]

In typical **uncompressed** bitmaps, image **pixels** are generally stored with a **color depth** of 1, 4, 8, 16, 24, 32, 48, or 64 bits per pixel. Pixels of 8 bits and fewer can represent either **grayscale** or **indexed color**. An **alpha channel** (for **transparency**) may be stored in a separate bitmap, where it is similar to a **greyscale** bitmap, or in a fourth channel that, for example, converts 24-bit images to 32 bits per pixel.

The bits representing the bitmap pixels may be **packed** or unpacked (spaced out to byte or word boundaries), depending on the format or device requirements. Depending on the color depth, a pixel in the picture will occupy at least **n/8** bytes, where n is the bit depth.

For an uncompressed, packed within rows, bitmap, such as is stored in Microsoft DIB or **BMP file format**, or in uncompressed **TIFF** format, a lower bound on storage size for a n-bit-per-pixel (2<sup>n</sup> colors) bitmap, in **bytes**, can be calculated as:

size = width • height • n/8, where height and width are given in **pixels**.

In the formula above, header size and color palette size, if any, are not included. Due to effects of row padding to align each row start to a storage unit boundary such as a **word**, additional bytes may be needed.

# Vector object

## Vector graphics

From Wikipedia, the free encyclopedia

(Redirected from [Vector image](#))

This article **needs additional citations for verification**.

Please help [improve this article](#) by adding [reliable references](#). Unsourced material may be [challenged](#) and [removed](#). (*January 2008*)

**Vector graphics** is the use of geometrical **primitives** such as **points**, **lines**, **curves**, and shapes or **polygon**(s), which are all based on mathematical equations, to represent **images** in **computer graphics**.

Vector graphics formats are complementary to **raster graphics**, which is the representation of images as an array of **pixels**, as it is typically used for the representation of photographic images.<sup>[1]</sup> There are instances when working with vector tools and formats is the best practice, and instances when working with raster tools and formats is the best practice. There are times when both formats come together. An understanding of the advantages and limitations of each technology and the relationship between them is most likely to result in efficient and effective use of tools.

### Overview

[[edit](#)]

Computer displays are made up from grids of small rectangular cells called **pixels**. The picture is built up from these cells. The smaller and closer the cells are together, the better the quality of the image, but the bigger the file needed to store the data. If the number of pixels is kept constant, the size of each pixel will grow and the image becomes grainy (pixellated) when magnified, as the resolution of the eye enables it to pick out individual pixels.

Vector graphics files store the lines, shapes and colours that make up an image as mathematical formulae. A vector graphics program uses these mathematical formulae to construct the screen image, building the best quality image possible, given the screen resolution. The

Example showing effect of vector graphics versus raster graphics. The original vector-based illustration is at the left. The upper-right image illustrates magnification of 7x as a vector image. The lower-right image illustrates the same magnification as a bitmap image. Raster images are based on pixels and thus scale with loss of clarity, while vector-based images can be scaled indefinitely without degrading.

[http://en.wikipedia.org/wiki/Technical\\_drawing](http://en.wikipedia.org/wiki/Technical_drawing)

## Technical drawing

From Wikipedia, the free encyclopedia

**Technical drawing**, also known as **drafting**, is the [academic discipline](#) of creating [standardized technical drawings](#) by [architects](#), [interior designers](#), [drafters](#), [design engineers](#), and related professionals. Standards and conventions for layout, line thickness, text size, symbols, view projections, descriptive geometry, dimensioning, and notation are used to create drawings that are ideally interpreted in only one way.

A person who does drafting is known as a [drafter](#). In some areas this person may be referred to as a drafting technician, draftsperson, or draughtsperson. This person creates technical drawings which are a form of specialized [graphic communication](#). A technical drawing differs from a common drawing by how it is interpreted. A common drawing can hold many purposes and meanings, while a technical drawing is intended to concisely and clearly communicate all needed specifications to transform an [idea](#) into physical [form](#).<sup>[1]</sup>

## ACD/ChemSketch 12.0 Freeware

### A Comprehensive Chemical Drawing Package

ACD/ChemSketch contains tools not available in some other commercial drawing packages, including tools for 2D structure cleaning, 3D optimization and viewing, [InChI](#) generation and conversion, drawing of polymers, organometallics, Markush structures, and IUPAC systematic naming capability for molecules with fewer than 50 atoms and 3 rings. Further extend and customize the capabilities of ACD/ChemSketch by programming with ChemBasic.

ACD/ChemSketch Commercial vs. Freeware - [Which one should I choose?](#)

### As an Educational Tool

ACD/Labs software aids in teaching key chemistry concepts to high school, undergraduate, and graduate chemistry students. In addition, students benefit from exposure in the learning environment, to the same tools they will encounter in the workforce.

Our [Academic Site Licensing Program](#) is an affordable way for qualifying academic institutions to make the **commercial** versions of ACD/ChemSketch, ACD/ChemFolder, and ACD/Labs Online (I-Lab) available to their students and faculty. Free access to site licenses of ACD/ChemSketch Freeware is also available. Read more on our [pages for Educators](#).

[ACD/Labs Online](#) offers pay-per-use access to many of our expert analytical, nomenclature, and physicochemical prediction tools.

Linux users can download a [compatible version of ACD/ChemSketch Freeware](#) that can be run with Code Weavers' CrossOver Office.

We do not provide technical support for our freeware products. Refer to the [FAQ page](#) for answers to any technical issues. ACD/ChemSketch Freeware is not compatible with earlier versions of freeware or commercial products.

**\*\*\* THIS VERSION IS FOR HOME AND EDUCATIONAL USE ONLY \*\*\***

## Chemistry on the Mac

Whether you're engaged in computational chemistry, x-ray crystallography, molecular dynamics, or quantum chemistry, Apple offers solutions that give you the computational power and capability to visualize and interpret results in a timely and meaningful manner.

The simulation of chemical reactions and complex molecular systems on desktop workstations and cluster computing systems is a growing trend. As commercial and open source chemistry software developers have embraced the Mac OS X platform, the growing selection of chemistry applications has enabled chemists to complete their entire workflow on the Mac.

### 3D Molecular Visualization

[3D stereo modeling](#) on the Mac Pro takes your graphics to a whole new dimension – literally. Advanced visualization plays an essential role in the study of macromolecular structure leading to drug discovery and design. With the latest developments in active 3D stereo graphics, scientists can substantially enhance their understanding of molecular function.

## Free chemical drawing package for academic and home use

26 November 2008

Symyx is offering its Symyx Draw 3.1 chemical drawing application as a free download for those wishing to use it for academic and home use). Symyx Draw 3.1 enables scientists to draw and edit complex chemical structures and reactions with ease, facilitating the collaborative searching, viewing, registering, and archiving of scientific information. To support academic researchers, Symyx Draw 3.1 also offers publication-quality drawing capabilities for presentations, reports and scientific papers , as well as improved integration with the Microsoft Office suite of software applications.

'As Symyx Draw is increasingly adopted and deployed in the commercial research environment, hands-on experience with the application at universities prepares students for success in today's highly competitive job market and in their future scientific careers,' said Dr Trevor Heritage, president of Symyx Software.

[geral] ChemBioOffice 2010 com acesso livre durante 2 meses – Utilizadores com interesses em Química e Bioquímica

Ricardo Franco <r.franco@dq.fct.unl.pt> (sent by geral-bounces@lists.fct.unl.pt)  
To: geral@fct.unl.pt

Did you know that your institution has set up a 2 months Trial Site Subscription through CambridgeSoft, makers of ChemBioOffice Ultra 2010? This means that you are able to download fully functional chemistry and biology software and have access to online databases, via the Universidade Nova de Lisboa site Subscription, for a 2 months trial period.

To download ChemBioOffice Ultra 2010, and access the related database subscriptions, go to:  
<http://sitesubscription.cambridgesoft.com/sitelicense.cfm?sid=1970>

For questions regarding the trial site Subscription, or any problems downloading, please contact:  
Ricardo Franco [r.franco@dq.fct.unl.pt](mailto:r.franco@dq.fct.unl.pt) <<mailto:r.franco@dq.fct.unl.pt>> Or  
Luisa Pinto Ferreira [lpf@dq.fct.unl.pt](mailto:lpf@dq.fct.unl.pt) <<mailto:lpf@dq.fct.unl.pt>>

Or you can get more information by giving me a call at 00800 875 20000 or + 617 588 9135. I'd also be happy to tell you about other databases and scientific software we offer, or answer any questions you have.

I hope to have the chance to speak with you.

Best Regards,  
Carina

# Nutritional Systems Biology Modeling: From Molecular Mechanisms to Physiology

Albert A. de Graaf<sup>1\*</sup>, Andreas P. Freidig<sup>1,2</sup>, Baukje De Roos<sup>3</sup>, Neema Jamshidi<sup>4</sup>, Matthias Heinemann<sup>5</sup>, Johan A.C. Rullmann<sup>6</sup>, Kevin D. Hall<sup>7</sup>, Martin Adiels<sup>8</sup>, Ben van Ommen<sup>1</sup>

<sup>1</sup> Biosciences, TNO Quality of Life, Zeist, The Netherlands, <sup>2</sup> Amsterdam Molecular Therapeutics, Amsterdam, The Netherlands, <sup>3</sup> Rowett Research Institute, Aberdeen, United Kingdom, <sup>4</sup> Department of Bioengineering, University of California, San Diego, La Jolla, California, United States of America, <sup>5</sup> Institute of Molecular Systems Biology, ETH Zurich, Zurich, Switzerland, <sup>6</sup> Department of Molecular Design & Informatics, NV Organon, a part of Schering-Plough Corporation, Oss, The Netherlands, <sup>7</sup> Laboratory of Biological Modeling, NIDDK/NIH, Bethesda, Maryland, United States of America, <sup>8</sup> Sahlgrenska Academy at University Göteborg, Göteborg, Sweden

**Abstract:** The use of computational modeling and simulation has increased in many biological fields, but despite their potential these techniques are only marginally applied in nutritional sciences. Nevertheless, recent applications of modeling have been instrumental in answering important nutritional questions from the cellular up to the physiological levels. Capturing the complexity of today's important nutritional research questions poses a challenge for modeling to become truly integrative in the consideration and interpretation of experimental data at widely differing scales of space and time. In this review, we discuss a selection of available modeling approaches and applications relevant for nutrition. We then put these models into perspective by categorizing them according to their space and time domain. Through this categorization process, we identified a dearth of models that consider processes occurring between the microscopic and macroscopic scale. We propose a "middle-out" strategy to develop the required full-scale, multilevel computational models. Exhaustive and accurate phenotyping, the use of the virtual patient concept, and the development of biomarkers from "omics" signatures are identified as key elements of a successful systems biology modeling approach in nutrition research—one that integrates physiological mechanisms and data at multiple space and time scales.

anatomical structures, and physiological processes. Accordingly, computational approaches differ widely with application.

In this review, we discuss the relevance of current and future applications of computational modeling in nutrition research. To this end, we first introduce important concepts in nutrition and the typical issues for modeling that arise in this field. Then, we give a broader review of some representative modeling approaches that have successfully addressed key nutritional questions. We then proceed to identify knowledge and technology gaps and suggest how the computational approaches may be integrated and extended to address these gaps and bring nutritional systems biology modeling an important step forward in the near future.

## Nutrition and Modeling

Nutrition research investigates the processes by which the living organism receives and utilizes the materials necessary for the maintenance of life and health (as defined by James S. McLester in his classic 1927 textbook) [1]. Traditionally, nutritional research investigates these processes at the level of the whole organism. From a thermodynamic viewpoint, all living organisms exist in a state that is far from equilibrium. To maintain this state, it is of central importance to harvest sufficient energy from the surroundings. This energy comes from the controlled combustion of the macronutrients carbohydrate, fat, and protein. The overarching organizing principle expressed in the Dynamic Energy Budget theory [2], which considers that energy from food is extracted (by the gut), stored in reserves (body fat, protein, and carbohydrate pools), and distributed throughout the body to fuel the processes essential for life. These processes include the generation of heat, maintenance of gradients across cell membranes, the production of gametes, the synthesis of structural mass, the establishment of maturity, somatic maintenance, and maturity maintenance. This organization effectively decouples the organism's internal energy from the external world, facilitating

## Introduction

Nutritional science is presently undergoing a data explosion as an increasing number of studies are incorporating methods from genomics, transcriptomics, proteomics, and metabolomics. However, it is presently unclear how these high-dimensional datasets can be related to the physiological characterization of phenotype using traditional nutritional research methods such as indirect calorimetry, nutrient balance, body composition assessment, and isotopic tracer methods. Thus, a fundamental challenge for nutrition research is to connect these data that are collected at vastly different spatial, temporal, and dimensionality scales. Although statistical analysis is still the method of choice to deal with the high dimensionality of "omics" datasets, systems biology and computational modeling approaches begin to reveal quantitative mechanistic relationships between these various measurements.

A large variety of computational modeling approaches have been applied to wide-ranging levels of organization—from molecules to humans. The processes that are modeled include molecular interactions, signaling pathways, metabolic pathways, cellular growth,
